ABWA WORLD

WEBSITE REBUILD

TECHNICAL DESIGN DOCUMENT

Next.js + TypeScript + Tailwind CSS + GSAP

Page-by-page design specification and staged Antigravity implementation plan

BLUE | WHITE | WARM GOLD

Prepared for: Action for Better World Association (ABWA)

Version 1.0 | 21 October 2026 | Planning baseline

Important implementation note

This TDD is the technical baseline, not final approved website copy or legal advice. Verify programme status, logo/tagline, social URLs, image permissions, testimonials, payment method and legal wording before publication.

Document Map

This TDD is organised as a set of focused, testable modules. Each module is intended to be reviewed independently and may be used as a checklist for a build or review stage.

Part	Contents
Front matter	Document control, how to use the TDD, executive summary, confirmed facts and verification rules.
Scope and structure	Goals, audience, user journeys, information architecture, navigation, URL rules and decision register.
Brand and content foundation	Visual system, colour, fonts, responsive grid, images, permissions, alt text, content model and governance.
Shared site shell	Expanded/compact header, mobile menu, four-column footer, floating actions, scroll-to-top, components and page hero.
Homepage and core pages	Detailed homepage section sequence, About page, programme directory and individual programme briefs.
Engagement and publishing	Get Involved, Volunteer, Donate, Partner, Impact, Stories, Gallery, Blog, three launch articles, FAQ, Search, Contact and legal pages.
SEO and structured data	Keyword intent, metadata, one-H1 policy, image SEO, JSON-LD @id, NGO/Organization, BlogPosting, sitemap.xml, robots.txt, canonical and redirects.
GSAP and motion	React integration, entry/reveal animation, parallax, pinning, horizontal scroll, scrub, hover, reduced motion and performance QA.
Engineering and quality	App Router architecture, folder structure, TypeScript, components, forms, security, analytics, accessibility, performance and testing.
Launch and maintenance	Deployment, canonical domain, editorial release, launch smoke test, post-launch maintenance, handover, risk register and go/no-go.
Antigravity build prompts	Sixteen discrete prompts from repository audit through foundation, pages, SEO, animation, QA and launch.
References	Official Next.js, GSAP, Schema.org, Google Search and WCAG documentation links.

SPECIFICATION MODULE 001

Document Control and Revision History

Purpose: This TDD is the working source of truth for structure, behaviour, routing, SEO, animation, content, quality assurance and launch.

Requirements

- Project: rebuild abwaworld.org as a modern responsive NGO website.
- Confirmed facts: founding year 2015; Nairobi, Kenya; phone +254 720 021 001; optional P.O. Box 1204-00515 Buruburu.
- Status labels: CONFIRMED, PROPOSED, VERIFY and DEFERRED. Update revision records when architecture, routes, payment flow or scope changes.

Implementation notes

- Confirmed requirements should be implemented unless amended; proposed choices are recommendations. VERIFY items require client approval.
- Keep the TDD beside the active Antigravity prompt. Do not ask the agent to build every stage at once.

Acceptance criteria

- Every scope change is logged with date, reason, owner and affected routes.
- No unsupported metric, quote, registration detail, donor name or claimed outcome is published.

Version	Date	Change	Status
1.0	21 Oct 2026	Initial detailed planning baseline	Draft for build planning
1.1+	When changed	Record significant changes	Pending

SPECIFICATION MODULE 002

How to Use this TDD with Antigravity

Purpose: The document is deliberately split into coherent, testable modules so the AI agent can preserve finished work.

Requirements

- Begin with Stage 0 repository audit and project baseline.
- Run one prompt at a time; review the diff, run tests, checkpoint/commit, then move on.
- Do not refactor unrelated pages unless a dependency is documented.
- Repair a broken stage before asking for the next stage.

Implementation notes

- Maintain PROJECT_STATUS.md with current stage, completed routes, known issues, package versions, decisions and next prompt.
- Each prompt needs explicit scope, files/routes, constraints, tests and a completion report.

Acceptance criteria

- No stage may silently remove approved sections or replace real content with generic placeholders.
- Each stage ends with files changed, commands/results, manual checks, blockers and next step.

SPECIFICATION MODULE 003

Executive Summary

Purpose: Create a polished public website for Action for Better World Association that communicates identity, programmes, community stories, and ways to participate in Kenya and internationally.

Requirements

- Next.js App Router, TypeScript, Tailwind CSS, GSAP and ScrollTrigger.
- Blue-led identity, mostly white backgrounds and limited warm-gold accents.
- Hero on normal content pages: real image, dark overlay, H1, subtitle and short descriptive text. Privacy and Terms do not use the hero template.
- Per-page metadata, canonical, one H1, image descriptions, JSON-LD, sitemap.xml and robots.txt.
- Two-tier desktop header condenses to one tier on scroll; four-column footer; floating action hub bottom-right; smaller outlined scroll-to-top bottom-left.
- At least three complete blog posts, a testimonial section and FAQ page at launch.

Implementation notes

- Use local image assets in public/images. Default to typed/MDX content unless a CMS requirement is confirmed.
- Do not add database, accounts or donation integration without explicit need and provider details.

Acceptance criteria

- Every approved route works across devices, no blank blog/programme pages remain, core CTAs work and production crawl files are valid.

SPECIFICATION MODULE 004

Confirmed Facts and Content Verification Rules

Purpose: Separate confirmed client facts from old website copy and draft source documents.

Requirements

- Confirmed: 2015 founding year, +254 720 021 001, Nairobi, Kenya, optional P.O. Box 1204-00515 Buruburu.
- Use Action for Better World Association as formal name where needed and ABWA World as website name, subject to brand approval.
- Supplied constitution appears to be a proposed draft; do not call it an approved current constitution without confirmation.
- Mathare/Kangundo programme documents and Umisiiyu 2026 work-camp document do not prove that the activities are active or currently open.

Implementation notes

- Maintain CONTENT_VERIFICATION.md and record the source or client approver for every important claim.
- Use “aims to” for objectives and past-tense outcomes only when evidenced.
- Do not invent email, socials, address, registration number, leadership names, impact counts, partners, donation details or programme availability.

Acceptance criteria

- ABWA approves active/historical status, logo/tagline, contact, founding year, legal wording and image permissions.

Decision gate

Publish the P.O. Box only if ABWA confirms it should be public. Do not infer a street address from “Nairobi, Kenya.”

SPECIFICATION MODULE 005

Project Goals and Non-Goals

Purpose: Define the finish line so design and implementation remain focused.

Requirements

- Create a credible, accessible, responsive NGO website for Action for Better World Association (ABWA), serving local and international audiences.
- Explain the organisation, programmes, verified impact, volunteer opportunities, partnership routes and ways to support the work.
- Support SEO from route planning through launch: unique metadata, semantic headings, descriptive image alternatives, structured data, sitemap and robots rules.
- Non-goals unless later approved: member portal, complex CMS, CRM, donor database, payment handling, event booking, ecommerce checkout or user accounts.

Implementation notes

- Treat all unapproved functionality as out of scope, not as permission to invent a version.
- Use a static/content-as-code approach initially, with a migration path to a CMS if staff-editing needs are confirmed.

Acceptance criteria

- All primary audiences can identify what ABWA does and what action they can take.
- Every feature maps to a documented need or is deferred.

SPECIFICATION MODULE 006

Primary Audience and Audience Needs

Purpose: Shape page copy and navigation for multiple audiences without making the homepage unfocused.

Requirements

- Kenyan community members and potential beneficiaries need locally understandable programme information and clear contact routes.
- International volunteers need credible programme context, expectations, eligibility, safety, costs if applicable, duration and an enquiry path.
- Donors and funders need governance confidence, transparent ways to support work and evidence-based reporting.
- Institutional partners need the organisation overview, focus areas and a partnership contact path.
- Researchers, media and general visitors need history, programme facts, stories and official contact information.

Implementation notes

- Design one clear primary narrative with secondary journeys reachable from the header, home sections and footer.
- Use plain international English; avoid unexplained local acronyms and claims of universal availability.

Acceptance criteria

- Navigation supports all listed audiences.
- Volunteer information does not imply an active camp or guaranteed acceptance without approval.

SPECIFICATION MODULE 007

User Journey Map and Conversion Paths

Purpose: Make every call to action point to an intentional next step.

Requirements

- New visitor: Home → About or programme → impact/story → CTA.
- Potential volunteer: Home/Programmes → Work Camp/Volunteer → requirements and enquiry form → confirmation only when a real service is configured.
- Potential donor: Home/Get Involved → Donate information → approved payment instructions or functioning provider checkout.
- Potential partner: About/Programmes → Partner With Us → partnership enquiry.
- Returning reader: Blog → related programme → get involved/contact.

Implementation notes

- Use internal links at contextual points and at the end of each public content page.
- Track CTA clicks only if privacy-compliant analytics is configured and disclosed.
- Do not equate button clicks with submitted or completed donations.

Acceptance criteria

- Each main journey has a primary CTA and a sensible fallback contact route.
- Forms show specific success only after the server/provider confirms submission.

SPECIFICATION MODULE 008

Information Architecture and Sitemap

Purpose: Establish the public route hierarchy before UI work.

Requirements

- Proposed core: /, /about, /programs, /programs/[slug], /impact, /get-involved, /volunteer, /donate, /partner-with-us, /stories, /stories/[slug], /gallery, /blog, /blog/[slug], /faq and /contact.
- Legal routes: /privacy and /terms; these intentionally omit the photographic hero.
- System endpoints: /sitemap.xml and /robots.txt.
- System pages: not-found and error states; optional search results route /search.
- Optional routes such as /testimonials should only be added if there is enough approved original content to justify a standalone page.

Implementation notes

- Keep slugs lowercase, readable and stable.
- Do not publish near-empty category or listing pages just to increase route count.
- Use redirect mappings if old indexed routes need migration.

Acceptance criteria

- All intended routes are documented and tested.
- No sitemap item returns 404, redirect loops or unintended noindex.

Route family	Primary purpose	Hero?
Home/About/Programs/Impact	Explain organisation and work	Yes
Volunteer/Get involved/Donate/Partner	Convert interest to an appropriate action	Yes
Blog/Stories/Gallery/FAQ/Contact	Inform, demonstrate, answer and connect	Yes
Privacy/Terms	Legal information	No
sitemap.xml / robots.txt	Crawler discovery rules	Not HTML pages
404/error	Recover from errors	No standard content hero

SPECIFICATION MODULE 009

Navigation Model and Label Rules

Purpose: Create a concise navigation system that does not overload the visitor.

Requirements

- Desktop top tier can show approved contact/search/social utilities.
- Primary navigation should prioritise About, Programmes, Impact/Stories, Get Involved and Contact.
- Donate may receive restrained accent styling only after the donation flow is confirmed.
- Mobile navigation must provide all key routes with an accessible menu button.
- Footer links complement, but do not duplicate every dropdown in a sprawling list.

Implementation notes

- Use descriptive labels and do not use ambiguous labels like “More” as the sole route to important information.
- Active state must be visible and accessible; avoid hover-only navigation.
- Keep keyboard and touch interactions equivalent.

Acceptance criteria

- Every required route is reachable in two or three deliberate navigation steps.
- No hover-only essential link.

SPECIFICATION MODULE 010

URL, Slug and Canonical Policy

Purpose: Avoid unstable addresses and duplicate URL variants.

Requirements

- Use lowercase hyphen-separated slugs, e.g. /programs/youth-empowerment and /blog/ethical-community-volunteering-in-kenya.
- Choose and consistently use the preferred production host, including or excluding www, after the owner confirms DNS configuration.
- Every indexable page has a self-referencing canonical unless a deliberate alternate is documented.
- Avoid date prefixes in evergreen programme URLs.

Implementation notes

- Create one source-of-truth site URL constant for canonical, Open Graph and sitemap generation.
- Normalize trailing slash behaviour in one place.
- Redirect legacy paths that have equivalent approved content; do not redirect unrelated routes to the homepage.

Acceptance criteria

- Canonical values match final production URLs.
- No duplicate indexable paths or mixed-host links.

SPECIFICATION MODULE 011

Scope Status and Decision Register

Purpose: Keep unresolved matters visible during AI-assisted delivery.

Requirements

- Confirmed: founding year 2015; phone +254 720 021 001; location Nairobi, Kenya; optional P.O. Box 1204-00515 Buruburu.
- Proposed: Next.js App Router, TypeScript, Tailwind CSS, GSAP, content-as-code, blue/white/gold palette.
- Verify: official logo/tagline, constitution/current registration status, programme active/historical status, camp dates, exact socials, preferred domain variant, email, testimonials and photo permissions.
- Deferred: payment integrations, CRM, CMS, member accounts, analytics vendor, newsletter provider and advanced form routing.

Implementation notes

- Maintain `DECISIONS.md` and `CONTENT_VERIFICATION.md`.
- Each Antigravity stage must report any decision it needed to assume.
- If a critical value is missing, implement a safe configuration placeholder only in code; never display it to visitors.

Acceptance criteria

- No fake links, phone numbers, email addresses, statistics, testimonials, programme dates or payment references are introduced.

SPECIFICATION MODULE 012

Visual Direction and Brand Principles

Purpose: Translate the requested brand into a coherent visual system.

Requirements

- Primary colours: blue and navy; mostly white backgrounds; restrained warm gold for small accents.
- Use spacious layouts, clear hierarchy, real community imagery and strong readability.
- Avoid visually generic stock-photos-as-proof, overdecorated cards, excessive gradients and constant motion.
- The official supplied logo should be used without distortion; confirm the current logo and tagline before final branding.

Implementation notes

- Suggested tokens: navy #15345A, primary blue #1E63B8, pale blue #EAF2FA, warm gold #B79045, ink #263445, muted #5E6B78 and white #FFFFFF.
- Keep gold for small highlights, eyebrow text, rules, icon details and selected CTA accents; do not use it for large body text on white unless contrast passes.
- Set spacing, radius, shadow, line-height and content-width tokens centrally.

Acceptance criteria

- Design uses a consistent token system rather than per-component arbitrary values.
- Contrast is checked for every text/background combination.

SPECIFICATION MODULE 013

Colour Tokens and Contrast

Purpose: Make the blue-led identity accessible and maintainable.

Requirements

- Define semantic tokens for background, surface, text, muted text, border, primary, primary-hover, accent, focus ring and status colours.
- White is the default surface; pale blue separates selected sections; gold remains a subtle accent.
- Buttons and links must have distinguishable hover, active, focus and disabled states.

Implementation notes

- Store tokens in CSS custom properties and map them to Tailwind configuration as appropriate.
- Validate text contrast using WCAG 2.2 AA targets: 4.5:1 for normal text and 3:1 for large text and essential UI boundaries where applicable.
- Never signal status by colour alone.

Acceptance criteria

- Automated or manual contrast tests pass for core design tokens.
- Focus indicators remain visible on both white and blue surfaces.

SPECIFICATION MODULE 014

Typography System and Local OTF/TTF Fonts

Purpose: Integrate user-supplied premium typefaces while preserving performance and licensing compliance.

Requirements

- Use provided .otf/.ttf fonts selectively, especially for high-impact hero/display headings.
- Body text must remain easy to read at mobile widths and for long-form project/blog content.
- A fallback system stack must be configured.
- Font redistribution and web embedding rights must be checked for the purchased licence.

Implementation notes

- Place validated font files in a code asset directory such as `src/assets/fonts/`; the `public/images/` rule is for images, not fonts.
- Use `next/font/local` with declared weights/styles and `display: swap`; do not load every font file if only one or two weights are needed.
- Prefer WOFF2 web exports if the licence and conversion workflow permit; preserve the original files separately.
- Set H1/H2/body/eyebrow/button styles in design tokens, not independent inline overrides.

Acceptance criteria

- No missing font request, layout jump or font console error.
- Licence terms allow website embedding.
- Headings are readable without forcing desktop line breaks onto mobile.

SPECIFICATION MODULE 015

Spacing, Grid, Containers and Responsive Tokens

Purpose: Define the layout primitives used by all pages.

Requirements

- Use a consistent max-width container, e.g. 72–80rem subject to visual review, with responsive side padding.
- Use a spacing scale and consistent vertical rhythm between sections.
- Cards must reflow from one column to two or three columns based on content and viewport.
- Avoid fixed-height text containers that clip translated or smaller-screen content.

Implementation notes

- Build shared `Container`, `Section`, `SectionHeading`, `Stack` and `Grid` primitives only where they reduce inconsistency.
- Use CSS grid/flex and content-driven height.
- Apply `min-width: 0` where children may overflow and `clamp()` for fluid typography sparingly.

Acceptance criteria

- No horizontal page overflow at target viewports.
- Content widths and section rhythm remain consistent across routes.

SPECIFICATION MODULE 016

Image Asset Directory and Naming

Purpose: Enforce the rule that every website image asset lives under `public/images/`.

Requirements

- All local raster/vector images used for rendered content must be stored under `public/images/` and referenced by root paths such as `/images/programs/mathare-youth-workshop.webp`.
- Do not rely on remote runtime image URLs for site imagery.
- Use meaningful filenames, lower case and hyphens.
- Create distinct folders for brand, heroes, programmes, gallery, stories, blog and UI only if it improves maintenance.

Implementation notes

- Suggested tree: `public/images/brand/`, `heroes/`, `programs/`, `gallery/`, `stories/`, `blog/`, `icons/`.
- Store image source, licence, creator, permission and alt-text notes in `docs/IMAGE_ASSET_REGISTER.csv`.
- Use `next/image` for local files and provide accurate dimensions or fill containers with explicit aspect ratios.
- Do not place fonts or downloaded application scripts in `public/images/`.

Acceptance criteria

- A script or review confirms all referenced local images resolve within `public/images/`.
- No broken image requests on any route.

SPECIFICATION MODULE 017

Real Image Sourcing, Rights and Community Dignity

Purpose: Use authentic photos responsibly and avoid false visual claims.

Requirements

- Prioritise ABWA-owned images, programme photographs and organisation-approved documentation.
- Where genuine coverage is missing, use properly licensed imagery with a documented licence; never represent stock imagery as a photograph of ABWA beneficiaries or an ABWA programme.
- Obtain publication consent for identifiable people when required, especially children and vulnerable communities.
- Avoid exploitative depictions, identifiable sensitive information and captions that infer a person's circumstances without approval.

Implementation notes

- Track source, original filename, consent/release status, licence, attribution need, subject/location, content route and approved alt text.
- Create optimised responsive variants; preserve originals outside the web-ready derivative folder.
- Never use images generated by AI or generic search results as if they document a real programme.

Acceptance criteria

- Every published photo has a known source and permission status.
- No sensitive identifying photo is published without the required approval.

Image integrity

"Real images" means genuine licensed or organisation-approved photographs; image realism alone is not evidence that a depicted event occurred.

SPECIFICATION MODULE 018

Image Formats, Crop and Performance Rules

Purpose: Create a fast media experience on mobile and desktop.

Requirements

- Use WebP or AVIF output where supported and justified; keep SVG only for suitable vector artwork/icons.
- Every image needs a designed crop/aspect ratio and sensible focal point.
- Hero crops must preserve important people and avoid cutting off heads or context.
- Never use full-resolution phone photos as page assets without optimisation.

Implementation notes

- Use local asset metadata and `next/image` size/quality settings.
- Specify dimensions/aspect ratio to reduce cumulative layout shift.
- Choose priority loading only for the visible LCP candidate, typically the hero image; lazy-load below-fold imagery.
- Use responsive source sizes appropriate to each layout.

Acceptance criteria

- Image bytes and dimensions are reviewed for the homepage and common inner template.
- Lighthouse/Core Web Vitals show no obvious image-driven layout shift.

SPECIFICATION MODULE 019

Alt Text, Captions and Decorative Images

Purpose: Provide meaningful accessible image descriptions without keyword stuffing.

Requirements

- Informative images need concise alt text describing their relevant content and context.
- Decorative flourishes use empty alt text or CSS backgrounds.
- Do not repeat adjacent captions word-for-word in alt text unless needed.
- Avoid claiming a photo shows a named project unless verified.

Implementation notes

- Maintain alt text as part of each image/content record.
- Use a page-specific description for heroes and a useful subject/action description for documentary photographs.
- Do not use filenames, “image of”, lists of keywords or unverified names as alt text.

Acceptance criteria

- Every non-decorative `<Image>` has purposeful alt text.
- Decorative images are ignored by screen readers.

SPECIFICATION MODULE 020

Content Model and Source-of-Truth Files

Purpose: Define the data structures behind pages before building the components.

Requirements

- Use typed data/content records for programmes, posts, stories, gallery items, testimonials, FAQs, navigation and CTAs.
- Proposed default is Markdown/MDX or typed TS content files; CMS selection remains a business decision.
- Every content record has slug, title, description, status, metadata, hero image, image alt text and CTA information as relevant.
- Content must support draft/review/published states conceptually even if static files implement publication.

Implementation notes

- Use TypeScript types or Zod schemas to validate content at build time.
- Keep large prose separate from layout logic.
- Use a single reusable detail template for posts and programme records.
- Do not duplicate canonical URL, SEO descriptions or organisation contact data across dozens of components.

Acceptance criteria

- Invalid required fields fail checks before release rather than rendering broken content.
- A content author can add a new post/programme by following documented data structure.

SPECIFICATION MODULE 021

Content Governance and Fact Checking

Purpose: Prevent old website copy from becoming unverified current claims.

Requirements

- Classify content as current verified, historical reference, proposed, needs approval or retired.
- Confirm whether feeding, computer training, home lighting, Clappers Baseball and shop/travel activities are active before featuring them as current.
- Confirm the supplied work camps and their dates/status before presenting volunteer booking options.
- Use outcomes and statistics only with a source, timeframe and approval.

Implementation notes

- Add an editorial review step for accuracy, inclusivity, spelling, SEO, image rights and CTA destination.
- Maintain `docs/content-sources.md` with a short evidence note for programme facts.
- Use neutral states such as “learn more” where status is unknown; do not present an open application without current availability.

Acceptance criteria

- No historical programme is falsely shown as currently active.
- Every quantitative claim can be traced to a source and date.

SPECIFICATION MODULE 022

CTA Vocabulary and Reusable Conversion Patterns

Purpose: Keep user journeys purposeful and calls to action consistent.

Requirements

- Primary CTA examples: Explore Our Programmes, Get Involved, Volunteer With ABWA, Partner With Us, Contact ABWA.
- Donation CTA is active only after method and flow are confirmed.
- Each content page ends with a relevant final CTA section.
- CTA destinations should match button labels exactly.

Implementation notes

- Use typed CTA configuration with label, href, variant and accessible name.
- If an action depends on missing provider setup, link to contact/enquiry rather than simulating completion.
- Use contextual CTA labels on cards instead of repeating “Read More” everywhere.

Acceptance criteria

- No dead buttons or `href="#"` placeholders in production.
- Primary CTA on each page has a clear task and valid destination.

SPECIFICATION MODULE 023

Header Architecture: Expanded and Compact States

Purpose: Specify the required two-tier header and scroll-condensed state.

Requirements

- At page top on desktop, use an expanded two-tier header: top utility row with approved search, socials, phone or quick CTA; main row with logo left and primary navigation plus action.
- After scrolling, transition to a compact one-row sticky header with logo, core navigation and essential CTA.
- Use the exact provided official logo asset; do not recreate wordmark in text unless no usable logo is supplied.
- Do not display unconfirmed social links, email address or search UI that has no working route.

Implementation notes

- Implement header state based on scroll threshold using a passive, cleaned-up listener or GSAP only if justified.
- Set `z-index` tokens and prevent content from jumping when the header changes height.
- Make keyboard focus work through both states.
- Use a menu button with `aria-expanded`, `aria-controls` and a usable mobile drawer/menu.

Acceptance criteria

- Header does not cover anchored headings or interactive controls.
- Transition is subtle and usable with reduced motion.
- Header remains operable at 320px and with keyboard-only navigation.

SPECIFICATION MODULE 024

Header: Search, Socials and Utility Links

Purpose: Define utility-row behaviour and prevent decorative controls.

Requirements

- Search must submit to `/search` or be omitted until it does.
- Social links use organisation-provided URLs and open safely; external links identify their destination accessibly.
- Phone link should use `tel:+254720021001`.
- A compact CTA is visible on desktop; mobile shows the highest-value action without crowding.

Implementation notes

- Provide a clear label for search input rather than placeholder-only labeling.
- Do not add social icon buttons without a destination.
- Utility row may simplify on tablet before switching to mobile menu.

Acceptance criteria

- Search returns useful results or a designed no-results state.
- Every visible header action has an implemented outcome.

SPECIFICATION MODULE 025

Mobile Navigation and Header Testing

Purpose: Make navigation genuinely responsive rather than shrinking desktop controls.

Requirements

- At small widths, use one clean header row and an accessible expandable menu.
- Prevent body background scroll where appropriate while a modal menu is open, and restore focus after closing.
- Support keyboard Escape to close menu and logical focus order.
- Avoid hiding key pages only inside nested accordion levels.

Implementation notes

- Test widths 320, 360, 390 and 430 pixels; test long labels, 200% zoom and landscape mode.
- Touch targets should be large enough for reliable activation; use WCAG target-size guidance as applicable.
- Use `aria-current="page"` for current link.

Acceptance criteria

- No clipped logo, overlapping action buttons or unreachable navigation item.
- Menu opens, closes, routes and restores focus correctly.

SPECIFICATION MODULE 026

Four-Column Footer Specification

Purpose: Create a useful footer, not a dense wall of links.

Requirements

- Column 1: logo, short approved organisation description and possibly small social links.
- Column 2: Explore—About, Programmes, Impact/Stories, Blog, Gallery.
- Column 3: Get Involved—Volunteer, Donate if approved, Partner With Us, FAQ.
- Column 4: Contact—Nairobi, Kenya; +254 720 021 001; optional PO Box 1204-00515 Buruburu; approved email only if supplied.
- Bottom strip: copyright year, Privacy, Terms and sitemap HTML link if desired.

Implementation notes

- Use tel link for phone and a map link only if approved location URL exists.
- Footer logo uses meaningful alt text or empty alt if adjacent brand text fully communicates it.
- On mobile, stack columns or use accessible disclosure groups; do not force four narrow columns.
- Keep legal and contact links visible without animation dependency.

Acceptance criteria

- All columns have valid destinations and wrap on mobile.
- Copyright year updates automatically.
- No placeholder email/social/map links.

SPECIFICATION MODULE 027

Floating Contact and Action Hub

Purpose: Implement the bottom-right button and animated shortcut menu.

Requirements

- Default state is one floating contact/action button at bottom-right.
- On activation, reveal labelled actions such as WhatsApp chat, Instagram, Facebook, Donate and Contact; only include configured, approved destinations.
- The menu must be keyboard-operable, touch friendly and visually clear.
- Donation shortcut remains hidden or points to information page until a real donation route is approved.

Implementation notes

- Use a real WhatsApp click-to-chat link only after the organisation confirms the chat number and intended prefilled message; do not assume every phone number is WhatsApp-enabled.
- Use a button with `aria-expanded` and `aria-controls`.
- Animate entry/exit with small opacity/translate/scale transitions; ensure layout and fixed layers do not overlap cookie notices or mobile browser chrome.
- On Escape or selecting a route, close the menu and return focus predictably.

Acceptance criteria

- All actions are real and destinations verified.
- Floating hub does not obscure cookie controls, bottom CTAs or form submit controls at mobile sizes.

SPECIFICATION MODULE 028

Bottom-Left Scroll-to-Top Control

Purpose: Define the smaller square outlined scroll-to-top button.

Requirements

- Use a compact square outline button on the bottom-left, visibly smaller and less prominent than the contact/action hub.
- Show it only after a practical scroll threshold.
- Use a clear accessible label such as “Scroll to top”.
- Hide or reposition if it overlaps an essential mobile control.

Implementation notes

- Use `window.scrollTo({top:0,behavior: ...})` with smooth behaviour only if reduced-motion preferences permit.
- Respect safe-area inset on mobile.
- Use an outline and visible focus ring; icon alone is acceptable only with an accessible name.

Acceptance criteria

- Button appears/disappears without layout shift.
- Activation moves the viewport to the top and respects reduced motion.

SPECIFICATION MODULE 029

Button, Link, Card and Form Interaction States

Purpose: Standardise UI feedback.

Requirements

- Buttons require default, hover, active, focus-visible, disabled and loading states as applicable.
- Cards with destinations must be semantically links, not clickable generic divs.
- Do not rely on hover for essential text on mobile.
- Form validation errors must be associated with their inputs and summarised where helpful.

Implementation notes

- Use shared variants in reusable components.
- Ensure contrast and motion stay consistent with the design system.
- Use CSS for simple hover states; reserve GSAP for richer sequences.

Acceptance criteria

- Every interactive item can be operated by keyboard and touch.
- No misleading visual button that has no action.

SPECIFICATION MODULE 030

Shared Hero Section Template

Purpose: Define the common hero required on every standard public content page.

Requirements

- Hero contains a genuine local image, dark overlay, H1, subtitle and concise descriptive paragraph.
- Hero also supports one primary CTA and an optional secondary CTA where appropriate.
- Privacy and Terms use a compact text-first title header without photographic hero.
- Sitemap and robots are technical endpoints, not HTML hero pages; error pages use purpose-built recovery layouts.

Implementation notes

- Use consistent responsive min-height with content-based sizing; avoid oversized hero heights on phones.
- Image should be stored under `public/images/` and have a focal-point/crop choice documented.
- Overlay must ensure text contrast and never be the only means of communicating critical information.
- Pass title and alt text as data to a reusable `<PageHero>` component.

Acceptance criteria

- One H1 per standard page and no duplicated hidden H1.
- Hero content remains visible and legible from 320px to wide desktop.

SPECIFICATION MODULE 031

Section Heading and Section CTA Patterns

Purpose: Keep repeated site patterns coherent.

Requirements

- Section headings may use eyebrow, heading, short description and optional inline CTA.
- Use semantic H2 for each major section and H3 for cards or subsections.
- Section background variations alternate white and subtle pale-blue rather than arbitrary colours.
- Section CTA should not duplicate every card CTA without adding value.

Implementation notes

- Create shared `SectionHeader`, `SectionCTA` and programme/story card primitives if they preserve semantic flexibility.
- Provide proper anchor offset for sticky navigation.

Acceptance criteria

- Heading outline is logical on every route.
- Decorative labels never replace meaningful heading text.

SPECIFICATION MODULE 032

Homepage Blueprint and Section Order

Purpose: Define the homepage as a focused introduction with multiple paths for different audiences.

Requirements

- Recommended order: hero; concise ABWA introduction; programmes grid; featured programme/work camp; approach/mission; verified impact; testimonial section; photo gallery preview; latest three blog/story posts; FAQ preview; final CTA.
- Add a compact mission/vision treatment only using approved wording.
- Avoid invented counters, donor logos, awards or “trusted by” statements.
- Homepage should not duplicate entire programme descriptions.

Implementation notes

- Treat section order as an initial UX proposal and validate at design review.
- Use a `HomePage` composition from reusable sections and content data.
- Choose imagery with meaningful variety and avoid repeating the same hero photo across the homepage.

Acceptance criteria

- Every section supports a stated objective and does not create content bloat.
- Home is useful even before all optional sections are populated.

SPECIFICATION MODULE 033

Homepage Hero: Story, Visual and Conversion

Purpose: Specify the opening view in detail.

Requirements

- Use a high-quality real ABWA-approved photograph under a dark overlay.
- H1 communicates the organisation's purpose without a generic claim of guaranteed change.
- Include a succinct subtitle and short supporting description.
- Primary CTA should go to Programmes or Get Involved; secondary CTA may go to About/Contact.
- Avoid auto-rotating slides and avoid making important copy part of the image itself.

Implementation notes

- Hero layout should adapt from text-overlay/side layout on desktop to clear stacked copy on mobile.
- Load the selected hero image efficiently as the likely LCP candidate.
- Animate text with a short staged entrance; avoid long delays before CTA availability.

Acceptance criteria

- Primary message and CTA appear immediately without requiring scroll.
- Readable contrast and acceptable LCP under realistic network conditions.

SPECIFICATION MODULE 034

Homepage Intro and Mission Snapshot

Purpose: Introduce ABWA after the hero.

Requirements

- Describe ABWA as Action for Better World Association and provide a short summary grounded in approved organisational material.
- Use the confirmed founding year 2015 only after the client verifies final public framing.
- Present one concise mission or purpose sentence, then link to the full About page.
- Avoid copying unapproved draft constitution language as final official wording.

Implementation notes

- Pair copy with one genuine community image or image collage stored in `public/images/`.
- Use a balanced text/image layout on desktop that stacks naturally on mobile.

Acceptance criteria

- Visitor understands who ABWA is and why it exists in one quick section.
- About CTA routes correctly.

SPECIFICATION MODULE 035

Homepage Programmes Overview

Purpose: Create a scannable programme index for major areas of work.

Requirements

- Use four to six cards based on verified active programme areas, not every legacy item at once.
- Candidate focus areas: youth empowerment and skills; women's empowerment and sustainable agriculture; environment; education/community wellbeing; livelihoods and inclusion if approved.
- Each card includes title, concise summary, genuine image, accessible image description and "Explore programme" link.
- Mark historic initiatives as past work only if appropriate.

Implementation notes

- Cards should be data-driven and link to actual detail pages.
- Use varied photos and consistent crops; no image-only card links.
- Use no fabricated outcome stats.

Acceptance criteria

- All cards use the same content structure, have valid destinations and work in mobile stacked layout.

SPECIFICATION MODULE 036

Homepage Featured Programme or Work Camp

Purpose: Give one current programme enough prominence without misrepresenting status.

Requirements

- Feature the best-documented active programme after ABWA confirms its status.
- If the current status of camps remains unclear, frame as a programme overview rather than an open booking offer.
- Show location only at the level supported by documentation and confirmed by ABWA.
- CTA may be “Explore the programme” or “Ask about volunteering” depending on availability.

Implementation notes

- Provide image, title, narrative, “what happens” highlights and CTA.
- Do not display dates, duration, fees, accommodation or participant slots as current unless confirmed.

Acceptance criteria

- No visitor can reasonably infer that an unconfirmed camp is open for booking.

SPECIFICATION MODULE 037

Homepage Impact and Evidence Section

Purpose: Build credibility through evidence rather than made-up counters.

Requirements

- Only publish verified figures with definition and timeframe.
- If no figures are approved, use qualitative statements about focus areas and link to documented activities.
- Show impact stories or programme outputs with dates and sources where appropriate.
- Do not use animated counters with zero-source numbers.

Implementation notes

- Add any metric with `value`, `label`, `asOf`, `source` and `approvedBy` fields.
- Counter animation is decorative; final value must be accessible and visible if JavaScript or reduced motion disables animation.

Acceptance criteria

- Every number has evidence and timeframe, or is omitted.
- Content is understandable without animation.

SPECIFICATION MODULE 038

Homepage Approach, Values and Community Model

Purpose: Explain how ABWA works.

Requirements

- Describe the organisation's approach using confirmed principles, e.g. community participation, practical training, environmental responsibility and partnership.
- Do not publish a formal values list unless ABWA approves it.
- Link programme activities to the community need they address, without promising guaranteed outcomes.

Implementation notes

- Use concise value cards or a simple process: listen, work with communities, build skills, learn and improve—labelled as proposed until approved.
- Use icons as reinforcement rather than sole labels.

Acceptance criteria

- Language describes a credible method without unsupported promises.

SPECIFICATION MODULE 039

Homepage Testimonials Section

Purpose: Provide the requested testimonial section ethically.

Requirements

- Publish only genuine, attributed and permission-cleared quotes from identifiable people.
- A testimonial should include the speaker name or approved anonymity label, role/community if approved, and quote approval record.
- Do not generate testimonial copy or imply beneficiaries endorsed the website.
- If there are no approved quotes at launch, omit the section from public output or use an approved “Community voices” story format without quotation marks.

Implementation notes

- Do not ship demo testimonials, lorem ipsum, fabricated star ratings or random names.
- A carousel is optional; static cards are preferred where there are only a few items.
- If a carousel is used, include controls, pause behaviour and a non-motion alternative.

Acceptance criteria

- Each rendered testimonial has approval evidence.
- No placeholder quote appears in production.

SPECIFICATION MODULE 040

Homepage Gallery Preview

Purpose: Show real visual evidence and lead visitors deeper.

Requirements

- Use a varied subset of approved photos from programmes and events.
- Each thumbnail has suitable alt text, meaningful context and a gallery destination.
- Do not expose private or sensitive details in photo captions.
- CTA leads to the complete Gallery page.

Implementation notes

- Use responsive grid or controlled horizontal row; avoid an infinite auto-scroll strip.
- If a lightbox is included, support keyboard close, focus management and previous/next labels.

Acceptance criteria

- Images link/open predictably; gallery works without hover.

SPECIFICATION MODULE 041

Homepage Blog and Story Preview

Purpose: Demonstrate active knowledge and updates.

Requirements

- Show the latest three published items with title, excerpt, date and category where relevant.
- Initial launch includes at least three fully written, reviewed blog posts.
- No “coming soon” or empty article tiles.
- If article cards use author data, use a real approved author or organisation attribution.

Implementation notes

- Sort dates intentionally and prevent future-dated drafts appearing publicly.
- Each card includes image alt text and a clear detail link.

Acceptance criteria

- All three launch articles are complete, unique and navigable.

SPECIFICATION MODULE 042

Homepage FAQ Preview

Purpose: Answer common visitor questions before the footer.

Requirements

- Show three to five questions with concise answers and a link to /faq.
- Content may cover how to contact ABWA, what programmes cover, volunteering enquiry process, support options and partner enquiries, subject to confirmation.
- Do not promise eligibility, costs, availability or response times without approval.

Implementation notes

- Use native details/summary or accessible accordion behaviour.
- FAQ structured data should only be added if page content complies with schema rules; never expect Google FAQ rich results.

Acceptance criteria

- All answers are useful and verified; disclosure controls work by mouse, keyboard and touch.

SPECIFICATION MODULE 043

Homepage Final CTA and CTA Flow

Purpose: End the page with a clear next action.

Requirements

- Use a high-contrast but restrained section with one primary action and optional secondary contact action.
- Message should invite a meaningful action such as explore programmes, contact ABWA or get involved.
- Donation wording depends on an approved support workflow.

Implementation notes

- Use contextual CTA destination derived from current priorities.
- Avoid competing primary buttons.
- CTA remains visible and readable when stacked on mobile.

Acceptance criteria

- Primary CTA works and leads to a complete route/form.

SPECIFICATION MODULE 044

About Page: Hero and Overview

Purpose: Plan the About page entry and organisation story.

Requirements

- Hero image, dark overlay, H1 “About ABWA” or an approved variation, subtitle, short description and optional CTA.
- Intro explains Action for Better World Association and its Kenyan community-development context.
- Founding year 2015 can be stated, but avoid claiming registration or legal status without proof.

Implementation notes

- Use a distinct hero image from the homepage where possible.
- Place a concise overview before longer history or focus-area details.

Acceptance criteria

- The About page immediately answers who ABWA is, what it does and where it works.

SPECIFICATION MODULE 045

About Page: History and Founding Story

Purpose: Document the history without embellishment.

Requirements

- State the organisation's founding year as 2015, per client confirmation.
- Describe origins only from verified client-supplied information.
- Do not invent founder names, founding incidents, geographic reach or awards.
- If formal milestones are not documented, keep the history short rather than fabricating a timeline.

Implementation notes

- Request/collect approved historical notes, photos and dates before final copy.
- A timeline component is optional and must only contain verified events.

Acceptance criteria

- Every historical statement has an approvable source.

SPECIFICATION MODULE 046

About Page: Mission, Vision, Objectives

Purpose: Present the organisational purpose in a credible structured way.

Requirements

- Use formally approved mission/vision language when supplied.
- Constitutional objectives can inform the draft, but note the supplied constitution is marked proposed and needs confirmation.
- Possible themes include sustainable community development, empowerment, education/capacity building, inclusion and environmental responsibility—subject to confirmation.

Implementation notes

- Use clear headings and short paragraphs; keep the official wording exact after approval.
- Do not overstuff the page with duplicated text from the homepage.

Acceptance criteria

- Mission/vision and objectives are signed off by ABWA.

SPECIFICATION MODULE 047

About Page: Focus Areas and Operating Principles

Purpose: Help visitors understand the breadth of ABWA's work.

Requirements

- Explain only approved focus areas and how they relate to programmes.
- Each focus area should link to at least one live detail page where that link is appropriate.
- Differentiate an organisation-wide priority from a specific programme or project.

Implementation notes

- Use a grid of three to six focus areas depending on approved content.
- Avoid icons that reinforce harmful stereotypes or show a generic vulnerable-person silhouette.

Acceptance criteria

- No orphan focus area with no description or next step.

SPECIFICATION MODULE 048

About Page: Leadership, Governance and Accountability

Purpose: Use governance content to build trust without disclosing unapproved personal information.

Requirements

- Leadership profiles are optional and need current names, titles, approved bios and image permissions.
- Publish registration and governance details only after the client supplies verifiable information.
- Do not display draft constitution text as a ratified governance document.
- Include an accountability/contact route for institutional enquiries.

Implementation notes

- If no approved team details exist, omit leadership cards and use a concise governance/accountability statement approved by ABWA.
- Avoid personal telephone numbers or personal emails unless explicitly approved for public use.

Acceptance criteria

- No fabricated team members or legal status claims appear.

SPECIFICATION MODULE 049

About Page: Geography and Communities

Purpose: Explain the organisation's place-based work carefully.

Requirements

- Use Nairobi, Kenya as the confirmed organisation location.
- Project material mentions Mathare in Nairobi, Kangundo in Machakos County, and Kibwezi/Makueni for the Umisiiyu work camp; confirm programme context and status before presenting as current.
- Do not imply nationwide or international field operations solely because the audience is international.

Implementation notes

- Use short location labels and approved images.
- A map is optional and only added if locations are accurate and it materially helps.

Acceptance criteria

- Location claims match approved programme documentation and are not broader than evidence.

SPECIFICATION MODULE 050

About Page: End CTA

Purpose: Convert organisational interest into a clear next action.

Requirements

- Offer Explore Programmes as primary CTA and Get Involved or Contact as secondary.
- Do not make donations the only way to participate.

Implementation notes

- Use consistent shared CTA component; ensure anchor offset under sticky header.

Acceptance criteria

- All destinations work and fit audience intent.

SPECIFICATION MODULE 051

Programmes Index: Hero and Intro

Purpose: Design the directory of ABWA programmes.

Requirements

- Standard hero image and short explanatory intro.
- Use filter/categories only if there are enough distinct approved programmes to make filtering useful.
- Differentiate active programmes, completed projects and planned initiatives.
- Offer direct cards for approved programme details.

Implementation notes

- Do not use “Programs” and “Programmes” inconsistently; choose British English spelling for the website unless ABWA requests otherwise.
- Provide introductory copy and a clear view-all listing.

Acceptance criteria

- No dead filters or blank category pages.

SPECIFICATION MODULE 052

Programmes Index: Card Data Contract

Purpose: Standardise how programme cards are populated.

Requirements

- Each record includes title, summary, image path, image alt, location if confirmed, status, slug and CTA.
- Status labels must be meaningful and only rendered where approved.
- Summaries describe purpose and activities rather than unsupported impact.

Implementation notes

- Validate that each slug maps to a page.
- Use responsive aspect-ratio containers and consistent card semantics.

Acceptance criteria

- Every visible programme card has complete required fields and a live link.

SPECIFICATION MODULE 053

Programme Detail Template: Hero, Need and Overview

Purpose: Specify the common programme detail page.

Requirements

- Use unique hero image, dark overlay, H1, subtitle and concise description.
- Explain the community context and need without deficit-based language or unsupported statistics.
- Identify geography only when verified.
- Primary CTA must match programme state, e.g. enquire, learn or support; not register if no application process exists.

Implementation notes

- Load content from typed data/MDX using a shared template.
- Add breadcrumb links and a visible back-to-programmes link.

Acceptance criteria

- Each programme uses one H1 and includes a real summary and CTA.

SPECIFICATION MODULE 054

Programme Detail Template: Activities and Delivery

Purpose: Explain what the programme actually does.

Requirements

- Use named activities, grouped into practical thematic areas.
- Distinguish current delivery from planned components and optional camp activities.
- Avoid listing a source document's ideas as accomplished outcomes.

Implementation notes

- Use H2 sections with compact lists, photos, captions and occasional pull quotes only when approved.
- Use a timeline only if dates/duration are current and confirmed.

Acceptance criteria

- A user can tell what happens, to whom and under what conditions.

SPECIFICATION MODULE 055

Programme Detail Template: Outcomes, Evidence and Gallery

Purpose: Present impact evidence responsibly.

Requirements

- Describe intended outcomes separately from demonstrated results.
- Use metrics only with date, method and source.
- Include a small image gallery only with approved photography and captions.
- Give donors/partners an appropriate next step without exaggeration.

Implementation notes

- Data model should differentiate `intendedOutcomes` from `verifiedResults`.
- No animated metric count-up unless data is verified and final value is accessible.

Acceptance criteria

- No intended outcome is mistakenly phrased as achieved impact.

SPECIFICATION MODULE 056

Programme Detail Template: Related Content and Final CTA

Purpose: Complete each programme user journey.

Requirements

- Link to related programmes, relevant blog posts and gallery/story content.
- End with one main action and one alternative contact route.
- If programme has ended, CTA should invite learning, partnership or future updates rather than joining an inactive programme.

Implementation notes

- Related links come from curated content relations rather than random recent content.
- Show status and last-updated information only when accurate.

Acceptance criteria

- Every detail page has at least one relevant exit path and no dead CTA.

SPECIFICATION MODULE 057

Programme Plan: Youth Empowerment and Skills

Purpose: Plan content based on Mathare youth programme documentation while awaiting active-status confirmation.

Requirements

- Potential page slug: /programs/youth-empowerment.
- Source themes: youth participation, girls' empowerment/social education, art/drawing/painting, music/talent development, teaching/skills and community action.
- The source mentions Mathare and Caso Upendo Primary School; verify spelling, current partnership and permission before naming publicly.
- Do not imply formal employment outcomes unless evidence is supplied.

Implementation notes

- Possible sections: overview; community context; activity areas; youth skills and participation; approved image gallery; status note; related education/environment content; final enquiry CTA.
- Mark the page historical or active based on client sign-off.

Acceptance criteria

- Programme status and school mention verified; activities described accurately.

SPECIFICATION MODULE 058

Programme Plan: Kangundo Women Group and Sustainable Agriculture

Purpose: Plan the women's group programme without overstating results.

Requirements

- Potential slug: /programs/womens-empowerment-sustainable-agriculture.
- Source themes: vegetable cultivation, crop selection, soil preparation, irrigation, pest/disease management, nutrition, improved yields and income generation.
- The source describes a 14-day camp, but do not publish as a current date-bound event without approval.
- Separate planned learning activities from verified agricultural or financial outcomes.

Implementation notes

- Possible sections: women's livelihoods; farming skills; food and nutrition; environmental sustainability; work-camp/volunteer information only if still offered; approved photo story; related posts.

Acceptance criteria

- Camp status, duration and volunteer conditions are approved before launch.

SPECIFICATION MODULE 059

Programme Plan: Umisiiyu Women Group Work Camp

Purpose: Keep the Umisiiyu project distinct from Kangundo.

Requirements

- Potential slug: /programs/umisiiyu-women-group.
- Supplied work-camp document associates the programme with Kibwezi, Makueni County, and sustainable agriculture/women's empowerment.
- The document filename references 2026, but exact dates and status are not established.
- Do not merge it with Kangundo: these are separate source documents and named projects.

Implementation notes

- Create a dedicated route only if ABWA confirms this is a distinct current or historical project worth documenting.
- Use a clear status label, a unique hero image and only approved photos/captions.

Acceptance criteria

- Project name, location, timing and status are verified; no booking CTA until availability is known.

SPECIFICATION MODULE 060

Programme Plan: Environmental Conservation

Purpose: Present environmental activities as a focus area only to the extent ABWA confirms.

Requirements

- Source documents mention tree planting, waste management, recycling and creative reuse.
- Confirm which activities ABWA has actually delivered, with dates or examples.
- Avoid unsupported claims about trees planted, carbon impact or land restored.

Implementation notes

- Possible page sections: local environmental action; tree planting where documented; waste reduction/recycling; community participation; verified story/gallery; support CTA.

Acceptance criteria

- Every programme example is evidence-backed or identified as an objective.

SPECIFICATION MODULE 061

Programme Plan: Education and Child Wellbeing

Purpose: Treat children's work with accuracy and safeguarding.

Requirements

- Legacy website mentions child feeding and school/community support; verify current activity.
- Any school name, beneficiary count, child image, sponsorship claim or programme result requires approval.
- Avoid exposing children's full names, personal histories, location details that raise risk, or school schedules.

Implementation notes

- Possible page sections: education/community need; approved activities; safeguarding commitment; evidence or partner story; how to enquire or support.
- Do not make donation claims tied to an individual child unless there is an approved safeguarding and fund-allocation process.

Acceptance criteria

- All child-related content has safeguarding/photo permission review.

SPECIFICATION MODULE 062

Programme Plan: Computer Skills and Digital Access

Purpose: Handle the legacy computer-training item as unverified until reviewed.

Requirements

- The old website mentions computer training; confirm whether the programme is active, past or proposed.
- If verified, describe curriculum level, participant group, location, dates/results only as supported.
- Do not promise certification, devices, internet access or job placement without evidence.

Implementation notes

- If historical, present as an archived impact story rather than active programme.
- Only add application CTA where an actual intake process exists.

Acceptance criteria

- Page state and claims are approved.

SPECIFICATION MODULE 063

Programme Plan: Home Lighting Initiative

Purpose: Review the legacy home-lighting initiative before reuse.

Requirements

- Current website reference is not proof of current programme delivery.
- Confirm the technology used, target communities, timeframe and actual outputs if this project is retained.
- Avoid claims of electricity access or safety outcomes without evidence.

Implementation notes

- Create an archived project story only when source materials and approved photographs exist.
- Otherwise exclude from launch navigation until validated.

Acceptance criteria

- No unsubstantiated energy or household-benefit claim is published.

SPECIFICATION MODULE 064

Programme Plan: Clappers Baseball Team

Purpose: Review the sports/youth initiative as potential legacy content.

Requirements

- The current/old website references Clappers Baseball Team; obtain confirmation of name, relationship and status.
- Do not use team marks or participant photos without permission.
- If retained, frame the work accurately as community sport, youth participation or a legacy project according to evidence.

Implementation notes

- Use a story format where the activity is historical and does not require a dedicated programme page.

Acceptance criteria

- Name, imagery, current status and claims approved.

SPECIFICATION MODULE 065

Programme Plan: Social Inclusion and Livelihoods

Purpose: Reflect the constitution's themes carefully.

Requirements

- Draft constitution identifies inclusion, people with disabilities, entrepreneurs/small business and community capacity building as objectives.
- Verify current programme activities before presenting these as operating programmes.
- Use respectful person-first or community-preferred language; do not portray people as passive recipients.

Implementation notes

- Keep organisation-wide objectives in About unless a specific operational programme exists.
- Do not create thin pages solely from general constitutional clauses.

Acceptance criteria

- A dedicated page exists only when substantial verified programme content supports it.

SPECIFICATION MODULE 066

Get Involved Page: Hero and Opportunity Map

Purpose: Offer several ways to participate, not just donate.

Requirements

- Standard hero with image, overlay, heading, subtitle and short intro.
- Opportunity cards may include volunteer, partnership, in-kind support and financial support only when each route exists.
- Explain that specific programme availability and acceptance must be confirmed.

Implementation notes

- Prioritise CTA by current organisational need after ABWA sign-off.
- No false urgency such as “only 3 places left” unless backed by current inventory.

Acceptance criteria

- Every opportunity explains the next step and works.

SPECIFICATION MODULE 067

Volunteer Page: Requirements and Process

Purpose: Set realistic expectations for local and international volunteers.

Requirements

- Clarify who may enquire, possible time commitment, expectations, safeguarding and organisational review process—but only after client approval.
- The work-camp documents mention a 14-day structure; exact current duration must be confirmed per camp.
- Provide a transparent enquiry/application flow and realistic response expectations only when agreed.
- Avoid implying visas, accommodation, meals, insurance or transport are provided unless approved.

Implementation notes

- Use a pre-enquiry form collecting only necessary information.
- Include privacy notice near the form and a clear submit state.
- Do not request sensitive identity, passport or health information in a general first-contact form.

Acceptance criteria

- User can understand required commitment and what happens after submitting.
- No invented participant fees or logistics.

SPECIFICATION MODULE 068

Volunteer Form and Lead Handling

Purpose: Define minimum viable volunteer enquiry handling.

Requirements

- Suggested fields: name, email, phone optional, country/location optional, area of interest, proposed time window, message, consent acknowledgement.
- Do not make sensitive or excessive fields mandatory.
- Provide server-side validation, abuse prevention and consent-aware data handling.
- Set recipient/CRM only after ABWA provides the intended destination and service credentials.

Implementation notes

- Use a server action or API route with input validation and rate limiting appropriate to the deployment.
- Keep provider credentials in server-side environment variables.
- If email delivery is not configured, do not claim the enquiry was emailed; provide a genuine fallback contact route.

Acceptance criteria

- Form errors are specific and accessible; success shown only after persistence/delivery succeeds.

SPECIFICATION MODULE 069

Donate Page: Content and Payment Decision Gate

Purpose: Plan donation information without inventing or prematurely integrating payments.

Requirements

- Describe why support matters and how funds/support are allocated only using approved wording.
- Payment methods, currency, M-Pesa paybill/till, bank details, card provider, receipts and donor data handling are unconfirmed.
- No checkout or payment instructions should launch without client-supplied official details and tested provider credentials.
- If payment is deferred, the page may invite visitors to contact ABWA for approved giving instructions.

Implementation notes

- Use a provider-neutral design until selected and reviewed.
- Do not collect raw card details directly.
- Do not display fake success pages, transactions or payment references.
- Add Terms/Privacy language for payment processing once method is selected.

Acceptance criteria

- Donation action is honest, secure, tested and reconciled to a real workflow; otherwise it routes to a contact enquiry.

Launch guardrail

A visually complete Donate page is not the same as a working donation system. Ship only the verified flow.

SPECIFICATION MODULE 070

Partnership Page and Enquiry

Purpose: Help funders and partners understand where collaboration fits.

Requirements

- Explain potential collaboration areas using verified programme information.
- Provide a partnership enquiry CTA and required fields such as organisation, contact name, email, area of interest and message.
- Do not publish partner logos or imply endorsement without permission.

Implementation notes

- Keep form fields proportional to the first conversation.
- Add data-handling notice and success/failure UI.
- Use a server-side provider integration chosen at implementation time.

Acceptance criteria

- Partner form submission has actual configured processing and no fake acknowledgement.

SPECIFICATION MODULE 071

Impact Page: Results, Stories and Reporting

Purpose: Create a dedicated place for evidence and learning.

Requirements

- Hero plus introduction that differentiates activity, output, outcome and long-term impact.
- Only approved reports/metrics and their time period may be shown.
- Provide qualitative stories if hard metrics are not available, with consent and context.
- Link to related programme pages and reports where supplied.

Implementation notes

- Use cards/charts only if the dataset and definition are reliable.
- No synthetic statistics.
- Any downloadable report must exist at a tested public path and include publication date.

Acceptance criteria

- Every outcome claim has evidence or is explicitly an aspiration.

SPECIFICATION MODULE 072

Stories Index: Community Narratives

Purpose: Separate editorial stories from formal programme marketing where useful.

Requirements

- Use a hero; present approved stories with title, excerpt, image and publication date.
- Do not use a beneficiary's personal story without informed approval and privacy review.
- Provide categories only if they aid discovery.

Implementation notes

- Reuse the article template with optional story-specific fields.
- Add related programme CTA without using manipulative language.

Acceptance criteria

- No empty story cards; no sensitive narrative published without consent.

SPECIFICATION MODULE 073

Gallery Page: Categories and Lightbox

Purpose: Design a meaningful archive of approved visuals.

Requirements

- Hero and short contextual intro.
- Categories may cover programmes, volunteering, environment, workshops and community events where genuine photos exist.
- Each image should have alt text and optional verified caption/date.
- No fabricated event dates or named project captions.

Implementation notes

- Keep images under `public/images/`; generate thumbnails separately if useful.
- Lightbox must have keyboard controls, close button, focus containment and descriptive names.
- Provide a usable grid when JavaScript animation is reduced/disabled.

Acceptance criteria

- Gallery works on touch devices and keyboard; all assets and captions are verified.

SPECIFICATION MODULE 074

Blog Index: Editorial Landing Page

Purpose: Make the blog useful from launch.

Requirements

- Use hero, introductory text, featured/latest posts and a readable card grid.
- At least three substantive posts should be published at launch.
- Provide categories only where meaningful and all cards link to full posts.
- Do not publish empty category archives.

Implementation notes

- Sort by date but ensure all initial post dates are realistic and approved.
- Use static generation for the content-as-code implementation.
- Include pagination or load-more only when the content volume justifies it.

Acceptance criteria

- Three posts are present and fully rendered; no blank page or “lorem ipsum.”

SPECIFICATION MODULE 075

Blog Detail Template: Content Structure

Purpose: Standardise long-form article pages for readability and SEO.

Requirements

- Each post has one H1, unique title, deck/summary, byline or organisation attribution, publication date and update date only when real.
- Structure article using H2/H3 sections, short paragraphs, lists, relevant images/captions and a closing CTA.
- Show related programme/topic links.
- Do not claim medical, legal, fundraising or policy expertise outside approved role.

Implementation notes

- Represent blog entries in typed MDX/frontmatter and validate required fields.
- Create Open Graph metadata and BlogPosting JSON-LD from the same source data.
- Include a visible back-to-blog link and reading-friendly max width.

Acceptance criteria

- Post matches metadata and visible title/date; article schema validates.

SPECIFICATION MODULE 076

Launch Blog Post 1: Sustainable Agriculture

Purpose: Define the first complete article, not an empty placeholder.

Requirements

- Working title: “Growing Resilient Communities Through Sustainable Agriculture in Kenya.”
- Target length 800–1,200 words after copywriting; article outline: community food security context; practical sustainable agriculture principles; women’s group learning themes from verified ABWA source material; irrigation/soil/crop diversity/pest awareness; household nutrition and livelihoods; limits and local adaptation; how to learn more.
- Use an approved real agricultural/community image with alt text and source record.
- Do not assert ABWA outcomes/yield increases unless documented.

Implementation notes

- Article should be informational, specific to the Kenyan context without unsupported statistics, and reviewed by a knowledgeable person.
- Provide related link to the women’s agriculture programme only if confirmed.
- Include a final CTA such as explore programmes or contact ABWA.

Acceptance criteria

- Full post has intro, at least four substantive H2 sections, conclusion, metadata and working CTA.

SPECIFICATION MODULE 077

Launch Blog Post 2: Youth Empowerment Through Creativity

Purpose: Define the second complete article.

Requirements

- Working title: “Youth Empowerment Through Creativity, Skills and Community Action.”
- Target length 800–1,200 words; outline: why meaningful youth participation matters; creative arts/music/skills as engagement routes; environmental and community action; safe inclusive programme design; what can be learned from documented Mathare activities; how communities/partners can engage.
- Do not claim all described activities are ongoing unless ABWA confirms status.
- Use a genuine, permission-cleared photo; never name or identify a child without approval.

Implementation notes

- Use language that highlights agency and dignity, not “saving” young people.
- Distinguish general educational discussion from evidence about ABWA.
- CTA routes to a verified programme enquiry or Contact page.

Acceptance criteria

- Post is complete and fact-checked with metadata, image alternative and valid CTA.

SPECIFICATION MODULE 078

Launch Blog Post 3: Ethical Community Volunteering

Purpose: Define the third complete article.

Requirements

- Working title: “What Ethical Community Volunteering in Kenya Should Look Like.”
- Target length 800–1,200 words; outline: community-led priorities; preparation and cultural humility; useful skills and realistic expectations; safeguarding and consent; sustainability beyond the volunteer visit; cost/transparency questions; how to make an informed enquiry.
- Do not imply ABWA currently accepts volunteers, provides accommodation or sells a particular 14-day package until confirmed.

Implementation notes

- Use useful original guidance, not generic “volunteer to change lives” marketing.
- If referencing ABWA work-camp documents, label factual examples and verify current relevance.
- CTA may be an enquiry, not a booking guarantee.

Acceptance criteria

- Article is complete, practical, accurately scoped and linked to a live action.

SPECIFICATION MODULE 079

FAQ Page: Information Architecture

Purpose: Make a substantive, searchable FAQ page.

Requirements

- Hero with an introduction and at least eight initial questions once answers are approved.
- Likely topics: who ABWA is; what it does; where it works; how to volunteer; programme availability; how to partner; donation methods; privacy/contact; whether work camps are open.
- Do not fill answers with promises that are not approved.

Implementation notes

- Use categories or anchored sections only if the question count warrants them.
- Accessible accordion pattern with visible state and keyboard support.
- FAQ content is indexable in page HTML; no client-only empty shell.

Acceptance criteria

- All questions have complete answers or are withheld until verified.

SPECIFICATION MODULE 080

Search Page and Search Behaviour

Purpose: Make the top-header search a genuine feature if included.

Requirements

- Search must search page titles, programme records, blog posts, stories and FAQ content as appropriate.
- Provide query, results count, matched terms only when implemented, empty-state help and accessible no-results view.
- Do not show private form submissions or draft content in search.

Implementation notes

- For a small static site, implement a lightweight client-side index or server/query approach suited to build output.
- Sanitize query handling and avoid rendering raw HTML from input.
- Search title/description/body excerpts from published content only.

Acceptance criteria

- Search UI has meaningful results and an explicit no-results state, or is removed until implemented.

SPECIFICATION MODULE 081

Contact Page: Content and Layout

Purpose: Specify the canonical contact route.

Requirements

- Hero with a relevant real photo, heading, subtitle and short description.
- Official phone: +254 720 021 001, link using `tel:+254720021001`.
- Location: Nairobi, Kenya. Optional P.O. Box 1204-00515 Buruburu, only if client approves public use.
- No email, business hours, map pin or social URLs until supplied/confirmed.
- Include a contact form if server-side handling can be configured.

Implementation notes

- Show phone and location in accessible text rather than icon-only information.
- A map embed is optional; omit if precise address is unavailable or privacy/performance trade-offs do not justify it.
- List form privacy purpose and expected use, approved by the organisation.

Acceptance criteria

- All displayed contact facts match confirmed info and phone link dials correctly.

SPECIFICATION MODULE 082

Contact Form: Validation and Delivery

Purpose: Define form behaviour from entry to resolution.

Requirements

- Suggested fields: name, email, topic, message and consent notice; phone may be optional.
- Client and server validation are both required.
- Protect against spam and oversized payloads; escape/validate inputs and avoid exposing provider errors to users.
- Form destination/provider must be selected and configured before launch.

Implementation notes

- Use server action/API route with schema validation.
- Keep credentials server-only and use environment variables.
- Log delivery state without logging sensitive message bodies unnecessarily.
- Show errors, success and retry options with accessible status messaging.

Acceptance criteria

- Form receives a real test message at approved destination.
- Failed delivery is not presented as success.

SPECIFICATION MODULE 083

Privacy Page: Required Sections and No-Hero Layout

Purpose: Provide a clear legal-information page without the standard image hero.

Requirements

- Use a text-first page header with H1 “Privacy Policy” and a visible effective/update date once approved.
- Explain data collected through contact/volunteer/partner forms, purposes, retention, providers, sharing, security, user choices/rights, cookies/analytics and contact route as applicable.
- Do not claim compliance with a law or certification without review.
- Legal wording must be reviewed by ABWA and appropriate counsel where needed.

Implementation notes

- Use readable max-width content, semantic H2/H3, TOC only if long.
- Describe only the actual production services; update the policy whenever form, analytics or payment providers change.
- Avoid an illustrative/stock hero; follow user requirement that legal pages omit it.

Acceptance criteria

- Policy accurately reflects deployed data practices and has approved date/wording.

SPECIFICATION MODULE 084

Terms Page: Required Sections and No-Hero Layout

Purpose: Provide service terms without inventing legal guarantees.

Requirements

- Use text-first page header with H1 “Terms and Conditions” and approved effective date.
- Potential areas: site use; information accuracy; intellectual property; links to third parties; volunteering/enquiry limitations; donations/payments if enabled; liability limitations subject to legal review; changes; contact.
- Do not create terms implying a donation/volunteer contract flow that does not exist.
- Legal text is reviewed before public launch.

Implementation notes

- Use semantic headings and a table of contents if needed.
- Use plain-language explanatory content; avoid presenting the draft as legal advice.

Acceptance criteria

- Terms are approved and match actual website features.

SPECIFICATION MODULE 085

Privacy and Terms Cross-Page Dependencies

Purpose: Keep legal pages synchronised with product behaviour.

Requirements

- The policies must reflect real form fields, email notifications, analytics, cookies, third-party embeds and donation providers.
- If optional analytics/cookie technology is not deployed, do not include blanket claims that it is used.
- Privacy link appears near forms and in the footer.
- Terms and Privacy have no photo hero as requested.

Implementation notes

- Add an implementation checklist for each privacy-sensitive dependency.
- Review policy after any provider integration or data-flow change.

Acceptance criteria

- No mismatch exists between website behaviours and policy language.

SPECIFICATION MODULE 086

Not Found, Error and Empty States

Purpose: Support visitors when a route, query or provider fails.

Requirements

- Create styled not-found page with clear H1, brief explanation, Home/Programmes links and Contact fallback.
- Create error boundary state that does not expose stack traces or environment data.
- Create search/gallery/listing empty states only when a real empty condition can occur.
- No standard hero requirement for system/error pages.

Implementation notes

- Keep errors brand-consistent, compact and accessible.
- Do not auto-redirect all 404s to homepage; preserve a true not-found response.

Acceptance criteria

- 404 returns the correct status, recovery links work, no secrets appear.

SPECIFICATION MODULE 087

SEO Strategy: Search Intent and Topic Clusters

Purpose: Give every route a clear search purpose.

Requirements

- Map homepage to organisation identity; About to organisation history/mission; programme pages to each verified initiative; volunteer pages to opportunity details; blog to informational queries.
- Do not make all titles target the same generic “NGO Kenya” phrase.
- Use natural phrase variations and location context only where accurate.
- No keyword stuffing or thin pages created solely for keywords.

Implementation notes

- Create a route/keyword intent spreadsheet for the final copywriting stage.
- Use internal links between informative posts and relevant programme pages.
- Do not promise search ranking position.

Acceptance criteria

- Each indexable route has a distinct primary intent and useful content.

SPECIFICATION MODULE 088

Per-Page Metadata Contract

Purpose: Standardise technical metadata on every HTML page.

Requirements

- Each indexable page needs a unique title and meta description; a canonical URL; Open Graph title/description/image; social card configuration; robots indexing directive where required.
- Set a single global metadata base/site URL source.
- Do not reuse identical metadata across all pages.
- Legal pages can be indexed if useful and approved; utility/system pages follow explicit policy.

Implementation notes

- Use Next.js App Router Metadata API via static `metadata` for fixed pages and `generateMetadata` for dynamic programme/post pages.
- Set `metadataBase` to final canonical origin.
- Generate titles/descriptions from content records and guard against missing values.
- Keep description lengths useful and readable; limits are display tendencies, not hard character guarantees.

Acceptance criteria

- No page ships without an intentional title, description and canonical strategy.
- Metadata title corresponds to the visible H1/page content.

SPECIFICATION MODULE 089

Heading Structure and One-H1 Rule

Purpose: Enforce semantic page outlines.

Requirements

- Every ordinary HTML route has exactly one visible H1.
- The hero heading is typically the H1; body section headings use H2 and card/item subheadings use H3.
- Do not select heading tags for appearance alone.
- Privacy/Terms retain a single H1 while omitting the hero.

Implementation notes

- Build reusable heading patterns that do not silently create nested H1 elements.
- Headings should describe section topic, not just slogans.
- Verify the rendered DOM on all route templates.

Acceptance criteria

- Automated/DOM check confirms exactly one H1 per public HTML route.

SPECIFICATION MODULE 090

Image SEO and Open Graph Image Planning

Purpose: Ensure image metadata supports understanding and sharing.

Requirements

- Every informative image has a description/alt attribute; hero-image descriptions are recorded.
- Open Graph image must be a suitable absolute production URL and visually readable when cropped.
- Each post/programme can provide a social image or use an approved default.
- Do not expose private or sensitive images in share cards.

Implementation notes

- Store image path and alt text in data; use `next/image` for display.
- If the platform generates OG images, test font/layout and absolute paths; otherwise select an existing approved local asset under public/images.
- Use consistent social aspect ratio and safe text margins when making graphic assets.

Acceptance criteria

- OG preview image loads at production URL; missing image paths fail the build/review.

SPECIFICATION MODULE 091

JSON-LD Structured Data and Stable @id Values

Purpose: Implement structured data only where it truthfully describes the site.

Requirements

- Organisation identity should be represented using Schema.org `NGO` where suitable, with fields such as name, url, logo, description, foundingDate, telephone, address/location and `sameAs` only when verified.
- Use a stable organization identifier such as `https://www.abwaworld.org/#organization` only after preferred host is confirmed.
- Use `WebSite`, `WebPage`, `BreadcrumbList` and `BlogPosting` where they correctly match visible content.
- Do not include unconfirmed email, alternate names, social URLs, address details or rating fields.
- Structured data must mirror content visible to users and must not promise search rich results.

Implementation notes

- Render JSON-LD using a carefully escaped JSON serializer or trusted Next.js pattern; guard against `</script>` injection.
- Keep one shared organization schema object and page-specific objects generated from the same content source.
- Use `@id` values as stable identifiers and connect pages to the organization entity.
- Run the Rich Results Test where supported and Schema Markup Validator; fix critical errors.

Acceptance criteria

- No contradictory duplicate Organization schemas.
- JSON-LD contains only approved facts and matches visible page text.

Important schema note

Schema markup helps search engines interpret content but does not guarantee rankings or enhanced search presentation. FAQ pages remain useful for humans; do not promise Google FAQ rich results.

SPECIFICATION MODULE 092

Organization / NGO Schema Field Map

Purpose: Detail the organization entity property choices.

Requirements

- Potential type: `NGO` or `Organization`, based on accurate semantics.
- `name`: Action for Better World Association; `alternateName`: ABWA World only if brand relationship is approved; `url`: canonical origin; `foundingDate`: 2015; `telephone`: +254720021001 in standard format.
- Use a `PostalAddress` only for confirmed public address details; add post-office box only after approval.
- Logo URL must reference a real supplied logo asset and the final canonical domain.
- Only verified social profiles may be added to `sameAs`.

Implementation notes

- Avoid unsupported `award`, `numberOfEmployees`, `donation`, `email`, `contactPoint`, or geo-coordinate facts.
- Organisation description should be concise and aligned with visible approved About content.

Acceptance criteria

- Schema validates and does not introduce any invented details.

SPECIFICATION MODULE 093

BlogPosting and Breadcrumb Structured Data

Purpose: Define structured data for content routes.

Requirements

- Each published article may include `BlogPosting` properties: headline, description, image, datePublished, dateModified when real, author/publisher and mainEntityOfPage.
- If no named author is approved, use the organisation publisher/author identity only where accurate.
- Breadcrumb schema reflects visible navigation hierarchy.
- Never create review/aggregate rating markup for testimonials unless all relevant policy requirements are actually met; simplest default is no review markup.

Implementation notes

- Generate schema from article records, not a separate handwritten copy.
- Use ISO 8601 dates and absolute image/page URLs.
- Check schema for draft entries that have not been published.

Acceptance criteria

- Visible article dates and structured dates match.
- Schema does not mark unpublished, missing or misleading data.

SPECIFICATION MODULE 094

sitemap.xml Generation and Maintenance

Purpose: Implement the XML sitemap using the framework convention.

Requirements

- Provide production `/sitemap.xml` generated from actual public/indexable routes.
- Include published static pages and published programme/post/story detail routes; exclude draft, private, duplicate and noindex pages.
- Use absolute canonical URLs and `lastModified` only when accurate.
- Do not list `robots.txt` or `sitemap.xml` as ordinary HTML pages inside the sitemap.

Implementation notes

- Use the Next.js App Router `app/sitemap.ts` convention unless project configuration dictates otherwise.
- Generate entries from the same route/content registry used by the site.
- For a small site one sitemap is sufficient; sitemap index only if the site grows enough to justify it.
- Validate XML in production and verify every URL returns a valid indexable page.

Acceptance criteria

- `/sitemap.xml` returns valid XML and contains all required published pages without 404s.

SPECIFICATION MODULE 095

robots.txt Generation and Indexing Policy

Purpose: Set crawler directives without accidentally blocking the site.

Requirements

- Provide `/robots.txt` using the Next.js metadata route convention `app/robots.ts` or equivalent.
- Allow public content to be crawled; exclude private/internal paths only if such paths exist.
- Reference the correct absolute sitemap URL and selected canonical domain.
- Robots rules do not replace `noindex`; sensitive pages should never rely on robots.txt for privacy.

Implementation notes

- Do not block `/images/`, Next.js static assets or CSS/JS required to render the site.
- Avoid blanket `Disallow: /` in production.
- Review staging-specific noindex/robots settings so they cannot leak into production.

Acceptance criteria

- Production robots file is valid and points to the production sitemap.
- Crawler access to needed public assets is not blocked.

SPECIFICATION MODULE 096

Canonical, Redirects and Legacy SEO Migration

Purpose: Preserve valuable existing paths without redirecting everything indiscriminately.

Requirements

- Inventory known legacy paths from current/old site and Search Console if available.
- Map old URL to the closest equivalent new page when content is genuinely equivalent.
- Return 404/410 for removed routes without a meaningful replacement rather than sending all paths to homepage.
- Keep one final destination per redirect and update internal links to target final URLs.

Implementation notes

- Maintain redirects in framework/hosting configuration and document route mapping.
- Test common spelling variants and old program routes from the existing site.
- Submit new sitemap after launch and monitor Search Console errors.

Acceptance criteria

- No redirect loop or chain; important legacy links resolve purposefully.

SPECIFICATION MODULE 097

Indexation, Thin Pages and Content Quality

Purpose: Prevent technically indexable but unhelpful pages.

Requirements

- Only substantive published routes should be indexable.
- No empty category/tag archives, empty testimonials page, empty search page or placeholder content.
- Draft/private content must not appear in sitemap or public listings.
- Terms/Privacy are substantive but legal review remains required.

Implementation notes

- Use noindex for suitable search utility URLs or filtered variants if they create duplication.
- Do not rely on noindex to hide confidential information.
- Create content review gates before adding a new indexable route.

Acceptance criteria

- No placeholder copy, lorem ipsum or thin public archive is shipped.

SPECIFICATION MODULE 098

Local and International SEO Signals

Purpose: Represent the organisation’s context accurately.

Requirements

- Use Nairobi, Kenya in relevant About/Contact text and structured data where appropriate.
- Do not add a fabricated street address or map coordinates.
- Provide consistent organisation name, phone and approved address data across site and any official profiles.
- Use language appropriate for local and international readers; do not imply multilingual support until translations exist.

Implementation notes

- If separate language versions are later added, implement proper locale URLs and hreflang pairs after translation review.
- Use `en-KE`/language metadata only if the website language and locale strategy support it; avoid false multilingual signals.

Acceptance criteria

- Location statements match verified details and no fake local-business address appears.

SPECIFICATION MODULE 099

GSAP Technical Integration and Lifecycle

Purpose: Integrate GSAP safely with React/Next.js.

Requirements

- Install `gsap` and `@gsap/react`; use ScrollTrigger for scroll effects.
- Animation hooks must run only in Client Components.
- Scope selectors to component roots and clean up animations, listeners, timelines and ScrollTriggers on unmount/re-render.
- Do not mark the entire app as client-rendered just to enable animation.

Implementation notes

- Use `useGSAP` from `@gsap/react` with scoped context where practical.
- Register ScrollTrigger once in the appropriate client-side module.
- Keep server components for static content and data; isolate interactive animation in small client components.
- Check current package versions and the official docs during implementation rather than pinning outdated versions by guess.

Acceptance criteria

- Navigating between routes does not duplicate triggers or produce memory leaks.
- Animations work after route transitions and in dev Strict Mode.

SPECIFICATION MODULE 100

Motion Principles, Duration and Easing

Purpose: Give the whole site a coherent motion language.

Requirements

- Use motion to communicate hierarchy, relationships and feedback rather than merely decorate.
- Entry animations should be short and not delay access to important copy/CTAs.
- Hover motion must not cause layout shift.
- No flashing, rapid parallax or forced long-duration scroll choreography.

Implementation notes

- Define motion tokens for quick interactions, section entrances and longer pinned sequences.
- Use transforms/opacity rather than animated layout dimensions when possible.
- Limit concurrent motion on one screen and reduce layers for mobile.

Acceptance criteria

- Animation feels consistent and remains comfortable for users who prefer reduced motion.

SPECIFICATION MODULE 101

Entry Animations: Hero and Section Reveal

Purpose: Plan entrances across page templates.

Requirements

- Hero title, subtitle and CTA can animate in a short stagger.
- Major sections may reveal with opacity/vertical translation when first entering view.
- Avoid hidden content that remains hidden if JS fails or an animation is blocked.
- Do not replay aggressive entrances every time the user scrolls slightly back and forth.

Implementation notes

- Use GSAP from a visible baseline; progressive enhancement should leave content readable without JavaScript.
- Trigger each section once by default unless re-entry behavior is intentionally designed.
- Keep stagger small for card grids and avoid animating many nodes individually on mobile.

Acceptance criteria

- No content becomes inaccessible if an animation fails or reduced-motion mode is active.

SPECIFICATION MODULE 102

ScrollTrigger Reveals and Timelines

Purpose: Define safe scroll-linked reveal behaviour.

Requirements

- Use ScrollTrigger for section reveals and sequenced content where it adds comprehension.
- Start/end positions must account for the compact sticky header.
- Do not pin normal content sections without a specific narrative/interaction reason.
- Ensure reveal thresholds work on short phone screens.

Implementation notes

- Use scoped refs and `useGSAP`; refresh calculations when images/fonts/content materially change dimensions.
- Avoid broad selector animations that affect components from other routes.
- Add debug markers only in development and remove them in production.

Acceptance criteria

- No trigger misfire after route change, image load or viewport resize.

SPECIFICATION MODULE 103

Parallax Section Effects

Purpose: Use parallax in selected sections, not everywhere.

Requirements

- Parallax is appropriate for selected decorative background layers or photographs where it adds depth.
- Keep foreground text stationary enough to read and preserve contrast.
- Avoid extreme offsets and avoid parallax on essential form content.
- Mobile fallback can disable/reduce parallax.

Implementation notes

- Animate a clipped background/image layer instead of shifting the entire section container.
- Avoid `background-attachment: fixed` dependence on mobile Safari.
- Test image crop when motion is scrubbed at top, middle and bottom.

Acceptance criteria

- No clipping, jitter or reduced legibility during parallax scroll.

SPECIFICATION MODULE 104

Pinned Scroll Sections

Purpose: Specify where pinning is allowed and how it degrades.

Requirements

- Pin at most one or two major sequences on a long page unless reviewed; use pinning only for a deliberate story/feature.
- Avoid pinning core content that could trap keyboard focus or delay the next section excessively.
- On mobile and reduced motion, use a normal stacked layout by default.
- Pinned duration and release point must be visually predictable.

Implementation notes

- Use ScrollTrigger pin only inside a stable layout context; avoid pinning inside transformed ancestors that break fixed positioning.
- Set scrub/pin spacing intentionally and verify route refresh/resize behavior.
- Do not pin the global header as part of section timelines.

Acceptance criteria

- Mobile users can reach all content without scroll traps or excessively long forced sequences.

SPECIFICATION MODULE 105

Horizontal Scroll Containers

Purpose: Implement horizontal scrolling for a small number of meaningful content strips.

Requirements

- Candidate uses: selected programme storytelling sequence, gallery/feature strip or timeline—not every card container.
- The section must indicate additional horizontal content and preserve scroll access via touch, mouse and keyboard.
- On mobile, native horizontal overflow can replace complex pinned animation.
- Provide previous/next controls when they materially improve discoverability.

Implementation notes

- For GSAP-driven horizontal motion, use `ScrollTrigger` plus `containerAnimation` correctly for nested triggers.
- Calculate travel distance from actual content width and remeasure on resize.
- Keep semantic document order logical; do not create a visual order that contradicts reading order.
- Set visible focus styles and avoid trapping keyboard users.

Acceptance criteria

- All cards reachable without a mouse; there is no clipped end item or horizontal page overflow.

SPECIFICATION MODULE 106

Scroll-Linked Scrub Animations

Purpose: Define animations tied to scroll progress.

Requirements

- Use scrub selectively for image movement, progress line, or subtle transitions.
- Do not attach complex animation to every scroll event manually.
- Important values/text must remain available if animation is disabled.
- Avoid animating typography to the extent it becomes hard to read.

Implementation notes

- Use ScrollTrigger `scrub` with small, understandable animation range and responsive fallbacks.
- Prefer compositor-friendly properties.
- Profile main-thread work on mobile.

Acceptance criteria

- Smooth motion on representative mobile device; text remains continuously readable.

SPECIFICATION MODULE 107

Hover and Microinteraction Animations

Purpose: Enhance buttons, cards and icons without making the site hover-dependent.

Requirements

- Hover may lift cards subtly, translate arrow icons or change border/opacity.
- On touch devices, actions work on tap and never depend on hover.
- Do not animate an element’s dimensions in a way that shifts nearby content.
- Respect `prefers-reduced-motion`.

Implementation notes

- Prefer CSS transitions for simple hover states; GSAP is reserved for coordinated or timeline-driven effects.
- Use focus-visible styles comparable to hover.

Acceptance criteria

- No essential information appears only on hover.
- Reduced-motion mode minimises transitions.

SPECIFICATION MODULE 108

Animation Distribution Matrix by Page

Purpose: Prevent an effect-heavy site from becoming chaotic.

Requirements

- Home: hero entrance, limited section reveals, one parallax/photo composition, one horizontal or pinned feature maximum, hover cards.
- About: restrained entry and timeline reveals; optional parallax background.
- Programmes index: staggered card reveal and hover feedback.
- Programme detail: hero entry, image/text reveals, optional pinned story on desktop only.
- Blog/story: minimal heading/reading progress and gentle media reveal; protect reading comfort.
- Gallery: hover/focus microinteractions and optional lightbox, not scroll hijacking.
- FAQ/contact/legal: minimal motion focused on control feedback.

Implementation notes

- Document each animated section in `docs/ANIMATION_MAP.md` with effect, trigger, desktop/mobile behavior and reduced-motion fallback.
- Do not stack parallax, scrub, pin and horizontal movement in the same viewport without design review.

Acceptance criteria

- Each effect has a stated purpose and fallback.
- Animation budget remains restrained per page.

Page/area	Default effect	Mobile/reduced-motion fallback
Home hero	Short staggered entrance	Short fade or no motion
Home featured strip	One horizontal/pinned sequence, desktop only	Native stacked/overflow row
About	Section reveal, optional background parallax	Fade/none
Programme pages	Scroll reveals, image movement	Normal stacked content
Blog/story	Minimal image reveal	Static reading layout
Gallery/FAQ/contact/legal	Hover/control feedback only	Tap/focus states; no parallax

SPECIFICATION MODULE 109

Reduced Motion, Accessibility and Motion Safety

Purpose: Treat motion preferences as a functional requirement.

Requirements

- Respect system `prefers-reduced-motion: reduce` for entrance, parallax, pin, scrub and smooth-scroll behaviour.
- All content remains visible and available if animation is turned off.
- Avoid vestibular triggers and do not create rapid large-area zoom/movement.
- Do not autoplay videos or auto-advance testimonials by default.

Implementation notes

- Provide a central motion preference helper for CSS/GSAP decisions.
- For reduced motion, use a static/normal-flow version of pinned and horizontal sections.
- Test with OS reduced-motion enabled, keyboard navigation and screen reader semantics.

Acceptance criteria

- Reduced motion has materially reduced motion, not just shorter duration on all effects.
- No section relies on animation for meaning.

SPECIFICATION MODULE 110

Animation Performance and QA

Purpose: Profile rather than assume animation is smooth.

Requirements

- Avoid animating width/height/top/left continuously where transform can work.
- Limit large blurred shadows and simultaneous image transforms on low-end devices.
- Avoid unnecessary ScrollTrigger refresh storms and duplicate global triggers.
- Test route transitions and browser back/forward.

Implementation notes

- Use Chrome performance tools and real devices when available.
- Check 60fps-like smoothness subjectively without promising a specific framerate on every device.
- Separate animation defects from layout/asset loading issues in issue logs.

Acceptance criteria

- No sustained scroll stutter or console warning on key pages and supported devices.

SPECIFICATION MODULE 111

Application Architecture: Server and Client Boundaries

Purpose: Define rendering approach and component ownership.

Requirements

- Use Next.js App Router.
- Default to Server Components for static content, metadata, page structure and content records.
- Use Client Components only for interactive menus, search controls, accordions when custom, gallery lightbox, floating action hub and GSAP effects.
- No database is required by default.

Implementation notes

- Keep client boundaries small and do not pass non-serializable functions/data through Server Component props incorrectly.
- Use static generation for known programme/blog routes where practical.
- Add `loading.tsx`, `error.tsx` and `not-found.tsx` where relevant.

Acceptance criteria

- Build output is stable and client JavaScript is not unnecessarily large.

SPECIFICATION MODULE 112

Suggested Folder and File Structure

Purpose: Give Antigravity a consistent layout target.

Requirements

- Use the App Router and group shared layout, routes, content, UI primitives and utilities.
- Keep page-specific content briefs separate from reusable UI components.
- Store all website image files inside `public/images/`.

Implementation notes

- Suggested: `src/app/(site)/page.tsx`, `src/app/(site)/about/page.tsx`, `src/app/(site)/programs/page.tsx`, `src/app/(site)/programs/[slug]/page.tsx`, `src/app/(site)/blog/page.tsx`, `src/app/(site)/blog/[slug]/page.tsx`, legal/system routes as appropriate.
- `src/components/layout`, `src/components/sections`, `src/components/ui`, `src/components/animation`, `src/content/programs`, `src/content/blog`, `src/lib/seo`, `src/lib/content`, `src/types`, `src/styles`, `public/images`.
- Adjust group names to the repository but preserve boundaries.

Acceptance criteria

- The folder tree is documented and page/asset responsibilities are clear.
- No duplicate competing definitions for route content.

SPECIFICATION MODULE 113

TypeScript Standards and Content Validation

Purpose: Catch errors early.

Requirements

- Enable strict TypeScript settings consistent with the repository.
- Avoid `any` unless justified and documented.
- Validate content records, internal route links and image paths.
- Use shared types for SEO fields, CTA records, programme status and article frontmatter.

Implementation notes

- Use schema validation at build time where it materially improves reliability.
- Use explicit unions for content status and CTA type.
- Prefer small pure helper functions for metadata/schema generation.

Acceptance criteria

- Typecheck runs successfully in CI/build.
- Invalid content cannot silently produce malformed page metadata.

SPECIFICATION MODULE 114

Component Inventory and Reuse Boundaries

Purpose: Keep the build maintainable.

Requirements

- Shared components likely include Header, MobileNav, Footer, PageHero, Breadcrumbs, Section, CTASection, ProgrammeCard, BlogCard, StoryCard, ImageGallery, FAQAccordion, ContactForm, FloatingActions, ScrollToTop and SEO/JSON-LD helpers.
- Do not make one giant page component responsible for all routes.
- Do not create abstractions for one tiny text element without clear benefit.

Implementation notes

- Document component props and intended client/server status.
- Keep meaningful semantic markup inside components.
- Use composition and data records rather than deeply nested conditional logic.

Acceptance criteria

- Shared components are reused where suitable; unique page needs remain possible without hacks.

SPECIFICATION MODULE 115

CSS and Tailwind Implementation Rules

Purpose: Balance speed and design consistency.

Requirements

- Use Tailwind CSS for layout and utility styling if repository/build setup supports it.
- Use CSS custom properties for theme tokens and motion preferences.
- Keep bespoke global styles limited to fonts, reset/base, reusable motion and theme variables.
- Do not install a UI library unless there is a clear need and visual fit.

Implementation notes

- Use class merging utilities only if the project already needs dynamic class composition.
- Keep responsive variants readable rather than long opaque class strings everywhere.
- Run a design consistency pass after all pages exist.

Acceptance criteria

- Styles are responsive, maintainable and free of unused conflicting patterns.

SPECIFICATION MODULE 116

Routing, Dynamic Slugs and Content Not Found

Purpose: Implement content routes deterministically.

Requirements

- `/programs/[slug]` and `/blog/[slug]` render only published entries.
- Unknown slugs return a real not-found response.
- Generate static params where content is known at build time.
- Maintain route-specific metadata.

Implementation notes

- Keep slug registry and sitemap source aligned.
- Avoid runtime filesystem traversal from user-controlled slugs.
- If content grows, document migration to a CMS before introducing an ad hoc database.

Acceptance criteria

- Unknown slug tests return not-found; valid slugs render correct content/metadata.

SPECIFICATION MODULE 117

Form Processing, Email and Environment Variables

Purpose: Prepare forms without committing to a vendor prematurely.

Requirements

- Enquiry forms require a server-side action/API route and configured recipient/provider before being considered live.
- All credentials belong in server-only environment variables.
- Required env vars are documented in `.env.example` with safe sample placeholders.
- Never commit real secrets, access tokens or private client data.

Implementation notes

- Use a schema validator, rate limiting/spam protection and error handling.
- Log technical delivery status without unnecessary personal data.
- Use the hosting platform’s environment-variable system for production values.
- Provider choice (email API, CRM, etc.) remains a decision gate.

Acceptance criteria

- Secrets are absent from browser bundles/repository history.
- Form delivery tested end-to-end in staging.

SPECIFICATION MODULE 118

Security Baseline and Privacy-by-Design

Purpose: Reduce avoidable security and data risks.

Requirements

- Collect only information required for the task.
- Sanitise content rendered as HTML and treat user input as untrusted.
- Use secure headers and a sensible Content Security Policy after checking Next.js/hosting requirements.
- Keep dependencies current and audit package changes.
- Do not store donor or volunteer information unless required and protected.

Implementation notes

- Review XSS, CSRF considerations for chosen submission mechanism, spam abuse, rate limits and provider error leakage.
- Keep external destinations explicit and secure.
- Never place sensitive personal data in query strings, analytics events or logs.

Acceptance criteria

- No known secrets or sensitive records are exposed; security-related configuration is documented.

SPECIFICATION MODULE 119

Analytics, Consent and Search Console Decision

Purpose: Prepare visibility without silently collecting unnecessary data.

Requirements

- Choose analytics vendor and cookie/consent approach only after owner approval.
- Search Console can be configured by the site owner; no service credentials need to be committed to source.
- The Privacy Policy must match what the production site actually collects.
- Do not ship analytics identifiers as fake placeholders.

Implementation notes

- Keep analytics wrapper optional and environment-configured.
- If an analytics tool requires consent in the applicable context, implement consent controls and test them before activation.
- Create a launch checklist for Search Console ownership verification, sitemap submission and index coverage review.

Acceptance criteria

- No analytics provider is loaded accidentally in development/production without configuration or policy review.

SPECIFICATION MODULE 120

Accessibility Requirements and Semantics

Purpose: Make accessibility part of acceptance, not a polish phase.

Requirements

- Target WCAG 2.2 AA as a practical baseline.
- Support keyboard access, visible focus, logical reading order, accessible names, contrast, zoom/reflow and meaningful alt text.
- Use landmarks such as header, nav, main and footer.
- Avoid colour-only status, keyboard traps and focus being hidden by sticky UI.

Implementation notes

- Run automated axe/Lighthouse checks and manual keyboard/reduced-motion checks.
- Provide skip-to-content link.
- Ensure forms announce validation and dynamic result updates.
- Check 200% zoom and responsive reflow.

Acceptance criteria

- No blocking accessibility defect remains on core routes.

SPECIFICATION MODULE 121

Performance and Core Web Vitals Targets

Purpose: Set measurable goals while acknowledging variability.

Requirements

- Aim for good field Core Web Vitals at the 75th percentile: LCP at or below 2.5 seconds, INP at or below 200 ms, CLS at or below 0.1.
- Treat these as targets; third-party scripts, real networks and devices affect results.
- Keep client JS and animation work limited.
- Optimise images, fonts and critical CSS.

Implementation notes

- Record a baseline after foundation and a final run after motion/media are added.
- Test production build and deployed preview rather than relying only on dev server.
- Avoid adding a library without understanding bundle and runtime cost.

Acceptance criteria

- No clear regression goes uninvestigated; key routes are profiled before launch.

SPECIFICATION MODULE 122

SEO, Accessibility and Link Automation

Purpose: Add repeatable mechanical checks.

Requirements

- Check exactly one H1, meaningful title/description, canonical presence, image alt attributes, internal link integrity, image path validity and structured data JSON parsing.
- Check that sitemap URLs resolve and no public link points to an empty `#`.
- Check for placeholder text and unapproved placeholder assets.

Implementation notes

- Add repository scripts where feasible, e.g. `lint`, `typecheck`, `build`, `test` and a lightweight content/link check.
- Run checks at end of each stage, not just at final delivery.

Acceptance criteria

- QA commands and expected outputs are documented.
- A content/link check can be rerun without manual detective work.

SPECIFICATION MODULE 123

Testing Strategy: Unit, Component, E2E and Manual

Purpose: Define the quality model.

Requirements

- Unit tests for metadata/schema/data helpers where useful.
- Component tests for menus, accordions, forms, floating actions and scroll-to-top.
- E2E tests for key journeys: home→programme; blog index→post; contact form validation; FAQ; mobile navigation; 404; search if enabled.
- Manual review for visual quality, motion, image rights and legal content.

Implementation notes

- Use test tooling already present where possible; avoid adding heavy frameworks without a reason.
- Use deterministic fixture content but never deploy fake quotes or numbers.
- Test network failures and provider misconfiguration.

Acceptance criteria

- Critical journeys pass in staging and test failures are resolved or explicitly waived.

SPECIFICATION MODULE 124

Browser and Viewport Coverage

Purpose: Set the viewports and device classes to verify.

Requirements

- Test latest stable Chrome, Safari/WebKit and Firefox where feasible; prioritise common mobile browsers for audience reach.
- Widths to test: 320, 360, 390, 430, 768, 1024, 1280 and 1440 pixels.
- Test desktop mouse, touch, keyboard-only, 200% zoom and reduced-motion preferences.
- Test slow-network behaviour for hero and gallery images.

Implementation notes

- Capture screenshots of key routes at mobile and desktop widths.
- Check sticky header + fixed floating controls + cookie/consent UI together if present.

Acceptance criteria

- No overflow/clipping or blocked interactions in the agreed matrix.

SPECIFICATION MODULE 125

Error Handling and Observability

Purpose: Make failures diagnosable without revealing sensitive data.

Requirements

- Provide clear client-facing generic failure copy for form/provider errors.
- Log enough technical context to diagnose route generation, email delivery and application failures.
- Avoid exposing stack traces, environment values or personal form content.

Implementation notes

- Use provider error boundaries and structured logs where platform supports it.
- Keep health checks lightweight; avoid creating admin endpoints with public access.

Acceptance criteria

- Production errors can be triaged from safe logs and users are not misled.

SPECIFICATION MODULE 126

Environment Configuration and Deployment

Purpose: Keep local, preview and production behaviour aligned.

Requirements

- Document required Node/package manager versions and build commands based on the chosen project template.
- Use separate local/preview/production environment variables where needed.
- Ensure final domain and canonical host are approved before deployment.
- Do not deploy with staging `noindex` configuration.

Implementation notes

- Use locked dependency versions via the package lockfile.
- Run production `build` before deploy.
- Configure redirects, headers, cache rules and environment values in the hosting platform.

Acceptance criteria

- Preview build succeeds and production environment variables are set without exposing secrets.

SPECIFICATION MODULE 127

Domain, HTTPS and Search Engine Launch

Purpose: Complete public launch deliberately.

Requirements

- Confirm whether canonical origin is `https://www.abwaworld.org` or `https://abwaworld.org`.
- Ensure HTTPS works, HTTP redirects to HTTPS, and one host is canonical.
- Set up Google Search Console and submit `/sitemap.xml`.
- Check robots.txt and remove staging noindex rules.
- Monitor 404s, coverage, canonical and sitemap status after deployment.

Implementation notes

- Confirm DNS/SSL before announcement.
- Keep a record of submitted sitemap, date, verified property and redirect mappings.
- Use analytics only according to approved plan.

Acceptance criteria

- Production domain, canonical, redirects, sitemap and robots rules agree.

SPECIFICATION MODULE 128

Content Entry and Editorial Release Checklist

Purpose: Prepare all copy/assets before release.

Requirements

- All public pages have final copy or approved launch-safe copy; no lorem ipsum.
- At least three substantial blog posts are complete.
- Hero, card, blog, gallery and program images have final asset paths and alt text.
- All testimonials, impact claims, project statuses and logos are approved.
- Legal pages have an approval record.

Implementation notes

- Build an editorial spreadsheet with page, owner, status, source, approver, last reviewed and asset list.
- Use draft state to keep incomplete pages out of the sitemap and navigation.

Acceptance criteria

- No blank page or unapproved content is publicly indexed.

SPECIFICATION MODULE 129

Launch Smoke Test and Rollback Plan

Purpose: Define the final gate before DNS cutover/announcement.

Requirements

- Check homepage, every primary route, mobile navigation, footer, floating actions, forms, search, legal pages and all CTA destinations.
- Check social metadata preview, canonical, JSON-LD, sitemap and robots.
- Confirm image loading and font rendering from production.
- Have a rollback plan or previous deploy available.

Implementation notes

- Record build commit, deployment ID, test time and reviewer.
- If a key journey fails, repair or disable that feature rather than launch a misleading placeholder.

Acceptance criteria

- Owner/reviewer signs off on key flows; rollback path is known.

SPECIFICATION MODULE 130

Post-Launch Monitoring and Maintenance

Purpose: Keep quality over time.

Requirements

- Review Search Console indexing/coverage and real-user Core Web Vitals where sufficient data exists.
- Check forms and external links periodically.
- Review programme status, current volunteer opportunities, phone/social details and legal/policy changes.
- Update dependencies securely and keep backups of source images/content.

Implementation notes

- Create a simple maintenance calendar and route owner for content updates.
- Monitor 404s and redirects after migrations.
- Review privacy and consent behaviour after adding any third-party service.

Acceptance criteria

- A named maintainer and change process exist.

SPECIFICATION MODULE 131

Client Handover Package

Purpose: Specify what the client/developer receives after delivery.

Requirements

- Provide source repository access, deployment ownership/access instructions, environment variable names (not secret values), domain/DNS notes, content editing guide, image naming/alt-text guide, legal approval record and route map.
- Explain how to add a programme/blog post and how to replace an image.
- Document any deferred items, known limitations and third-party billing/renewal requirements.

Implementation notes

- Do not include private credentials in the PDF or repository.
- Provide a checklist for access transfer and MFA.
- Provide a demo of key editing, publishing and form workflows.

Acceptance criteria

- A new maintainer can understand the structure and deploy/build with documentation.

SPECIFICATION MODULE 132

STAGE PROMPT 00 — Repository Audit and Baseline

Audit first; do not begin the full build.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Inspect the existing repository, current framework/version, file structure, package manager, installed dependencies, routes, styles, assets, tests and deployment configuration.
- Do not delete or rewrite existing work before explaining why. Do not invent copy or insert fake content.
- Create or update `PROJECT_STATUS.md`, `docs/DECISIONS.md`, `docs/CONTENT_VERIFICATION.md` and a route/asset inventory. Compare current structure with the ABWA World Website TDD.
- Return: current state, gaps, risks, recommended staged changes, build/test commands, all blocking questions and the exact next stage. Do not implement unrelated UI in this audit.

Implementation notes

- Run existing lint/typecheck/build/test commands where available; report real outputs, not assumed success.
- Preserve existing assets and work; create a Git checkpoint before major changes.

Acceptance criteria

- Repository facts are documented; no files were removed without approval.
- All unknowns are recorded and the project can proceed to the foundation stage.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 133

STAGE PROMPT 01 — Framework Foundation and Design Tokens

Create the minimal technical foundation without trying to build every page.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Implement or stabilise Next.js App Router with TypeScript and Tailwind CSS consistent with the existing repository.
- Create global layout, CSS design tokens for ABWA navy/blue/white/subtle gold, responsive container/section primitives, font integration placeholder and semantic base styles.
- Set up the finalizable site configuration for the canonical domain, confirmed phone +254 720 021 001, Nairobi, Kenya and optional PO Box only when enabled by config.
- Create `src/app`, components, content, lib, types and `public/images` structure as compatible with repo.
- Do not add a database, CMS, payment gateway, analytics, email provider or sample credentials.

Implementation notes

- Create `.env.example` only for genuinely required integrations, with fake-looking safe placeholders clearly labelled.
- Keep server components as default; do not add `use client` to the entire app.
- Document how to run dev/build/lint/typecheck.

Acceptance criteria

- `npm run build` or equivalent succeeds.
- A minimal accessible layout renders at desktop and mobile.
- Colour and typography tokens are centrally defined.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 134

STAGE PROMPT 02 — Fonts, Image Inventory and Shared UI Primitives

Build brand assets and reusable UI only.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Inspect available project files for ABWA logo, project photos and provided OTF/TTF font files. Do not pretend a missing font or photo exists.
- Ensure every local website image is inside `public/images/`; normalise descriptive filenames and create an image asset register.
- Integrate approved locally supplied fonts using `next/font/local`, after checking web embedding rights; provide accessible fallbacks.
- Implement reusable Container, Section, SectionHeader, Button/Link variants, PageHero, Breadcrumbs, image/card primitives and skip link.
- Use local images with `next/image`; add real, accurate alt text and avoid external image URLs.

Implementation notes

- Create a visual asset register with source, licence/consent, intended routes and approved alt text.
- If licensing/approval is unknown, flag the image rather than making assumptions.
- No empty href or placeholder button.

Acceptance criteria

- All assets resolve from `public/images/`.
- Components are responsive and have focus/hover/disabled states.
- Font loads without a console error and is licensed for embedding.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 135

STAGE PROMPT 03 — Header, Footer and Floating Controls

Implement global navigation systems.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Build the expanded desktop header with two tiers at page top: utility tier for only approved search/social/contact/actions and a main tier with logo, primary nav and one main CTA.
- On scroll, condense to a compact one-row sticky header with a subtle transition and no layout jump.
- Build a mobile header/menu with aria-expanded, Escape handling, logical focus and accessible active links.
- Build a four-column footer: ABWA identity, Explore, Get Involved, Contact. Include Nairobi, Kenya and +254 720 021 001; display P.O. Box 1204-00515 Buruburu only if configured/approved.
- Build bottom-right expandable action hub and smaller bottom-left outlined scroll-to-top control. Use WhatsApp/social URLs only if the client has supplied and approved them.

Implementation notes

- No invented email, social links, map URL, WhatsApp endpoint or donation payment route.
- Phone link uses `tel:+254720021001`.
- Avoid overlap among fixed controls on mobile and respect safe-area insets.

Acceptance criteria

- Menu/navigation works by keyboard and touch.
- Header condenses after scrolling and remains accessible.
- Floating actions expose only real approved destinations.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 136

STAGE PROMPT 04 — GSAP Integration and Motion System

Install and scope animation safely.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Install current compatible `gsap` and `@gsap/react`; use ScrollTrigger for scroll-linked behaviours.
- Create a small animation utility/pattern using `useGSAP`, scoped refs and cleanup; keep animation in client components only.
- Implement reduced-motion handling and normal-flow fallbacks.
- Create `docs/ANIMATION_MAP.md` and list which effects belong on which pages before applying them widely.
- Do not add parallax/pin/horizontal scroll to every section. First build and test a small prototype on one representative page.

Implementation notes

- Keep server components as default.
- Clean up triggers/listeners across route navigation, resize and React Strict Mode.
- No core text or CTA depends on animation to become visible.

Acceptance criteria

- No duplicate ScrollTriggers or console errors.
- Reduced motion disables/reduces high-motion effects.
- Documented prototype is reviewed before rollout.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 137

STAGE PROMPT 05 — Homepage Structure and Responsive Layout

Build the homepage according to the TDD content plan.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Implement home sections in this order: hero, ABWA introduction, programmes overview, featured programme, approach/mission, evidence/impact, testimonials, gallery preview, latest three blog/story cards, FAQ preview and final CTA.
- Hero includes approved local real image, dark overlay, one H1, subtitle, short descriptive text and working primary CTA.
- Use only verified facts: founding year 2015 as confirmed; location Nairobi, Kenya; phone +254 720 021 001. Do not invent metrics, quotes, partners or programme status.
- Use placeholders only for layout during development and clearly mark them in content files; do not ship them publicly.
- Every section must be mobile responsive and images must come from `public/images/`.

Implementation notes

- If no approved testimonials exist, omit the testimonial module at render time or prepare a non-public draft—not fabricated quotes.
- Impact area uses only verified evidence, otherwise explain programme focus without fake numbers.
- Use moderate reveal animation and no auto-rotating hero.

Acceptance criteria

- Homepage is complete at all agreed viewport widths.
- All CTAs route to actual pages.
- No fake statistics or testimonials.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 138

STAGE PROMPT 06 — About Page

Build the About page as a factual organisation profile.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Create About page with unique hero image, H1, subtitle, descriptive summary, history/founding year, mission/vision/objectives, focus areas, operating approach, governance/accountability section if approved, geography and final CTA.
- Use 2015 as founding year only as confirmed, but do not invent founder, registration, leadership or milestones.
- Treat the supplied constitution as draft/proposed until approval is confirmed.
- Use real local images and accurate alt descriptions.
- Every major section must have a clear purpose and semantic H2/H3 hierarchy.

Implementation notes

- Optional unverified sections must be omitted or flagged for review rather than filled with generic claims.
- Include links to programmes and contact.

Acceptance criteria

- Exactly one H1.
- All claims are traceable/approved.
- Hero and CTA work on mobile and desktop.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 139

STAGE PROMPT 07 — Programme Index and Detail Template

Implement the program directory and reusable details.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Build `/programs` and `/programs/[slug]` with typed content records and a reusable detail template.
- Programme detail includes hero, overview/context, activities, intended outcomes vs verified results, approved image gallery, related content, status and final CTA.
- Use candidates only after status review: Mathare youth empowerment; Kangundo women/sustainable agriculture; separate Umisiiyu women group initiative; environmental conservation; education/child wellbeing; computer training; home lighting; Clappers Baseball; livelihoods/social inclusion.
- Do not merge Kangundo and Umisiiyu; do not claim work camps are currently open unless confirmed.
- Unknown slugs must show a real not-found page.

Implementation notes

- Each published record has slug, title, summary, hero image path/alt, status, metadata, sections and valid CTA.
- Do not generate thin pages from objectives alone.

Acceptance criteria

- Programme cards and details are complete and valid.
- No false active/historical status.
- All internal links resolve.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 140

STAGE PROMPT 08 — Get Involved, Volunteer, Donate and Partner

Implement engagement journeys with safe decision gates.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Build `/get-involved`, `/volunteer`, `/donate` and `/partner-with-us` using page-hero template, explanatory sections and working final CTA.
- Volunteer page must explain application/enquiry steps and only verified expectations/logistics; current camp dates, costs, accommodation and acceptance criteria require ABWA approval.
- Donation page must not invent M-Pesa/bank/card details or pretend a transaction happened; until provider is selected, route visitors to a real contact enquiry.
- Partner page includes a concise partnership explanation and contact form only when server-side handling is configured.
- Collect minimum necessary form data and link to privacy information.

Implementation notes

- Keep credentials server-only; do not commit secrets.
- If form destination/provider is not configured, mark the form unavailable in deployment checklist and use an honest fallback.
- No fake urgency or fabricated donor/partner logos.

Acceptance criteria

- Every path has a real and tested next step.
- No fake payment success or false camp booking.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 141

STAGE PROMPT 09 — Blog, Stories and Three Complete Launch Posts

Implement real long-form content, not blank pages.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Build `/blog` and `/blog/[slug]` with complete article template: title/H1, summary, date, author/publisher, body sections, approved image/alt, metadata, BlogPosting structured data, related link and final CTA.
- Create three full, substantive draft posts: “Growing Resilient Communities Through Sustainable Agriculture in Kenya”; “Youth Empowerment Through Creativity, Skills and Community Action”; “What Ethical Community Volunteering in Kenya Should Look Like.”
- Each draft should target roughly 800–1,200 words after the separate copywriting/review pass, with multiple meaningful H2s and no lorem ipsum.
- Do not invent ABWA outcomes or imply programmes are active unless confirmed.
- Implement stories listing only if real approved stories exist.

Implementation notes

- Use typed Markdown/MDX or content files with required-field validation.
- Dates, authors and image credits are factual.
- Posts must be substantive before launch and reviewed by ABWA.

Acceptance criteria

- At least three complete articles render and link correctly.
- Article metadata and visible title/date agree.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 142

STAGE PROMPT 10 — FAQ, Contact and Search

Create usable information and enquiry tools.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Build `/faq` with approved question-and-answer content and accessible accordion behaviour; do not promise Google FAQ rich results.
- Build `/contact` with confirmed phone +254 720 021 001, Nairobi, Kenya, and optional approved PO Box. Add form only with real server-side handling.
- Implement search only if header search routes to a useful `/search` result experience across published content.
- Do not make up an email, social link, expected reply time, form recipient or programme availability.
- Every form requires validation, success/failure states and nearby privacy explanation.

Implementation notes

- Ensure screen-reader names/state and keyboard operation.
- If no form backend exists, show a truthful contact route instead of a fake form.

Acceptance criteria

- FAQ answers are reviewed.
- Contact links work; form submits end-to-end if enabled.
- Search has results and no-results states if included.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 143

STAGE PROMPT 11 — Legal Pages and System States

Implement approved legal and error routes.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Build `/privacy` and `/terms` without the standard photographic hero; each uses one H1, readable typography and semantic sections.
- Use legal drafts only as drafts pending ABWA/legal review; align content with actual deployed forms, analytics, cookies and donation integrations.
- Build styled not-found and error pages with recovery links and no sensitive stack trace.
- Do not create fake contact email or claim compliance/certification without review.

Implementation notes

- Add footer legal links.
- Keep system routes out of ordinary content navigation except necessary footer links.
- Set noindex/canonical strategy intentionally for utility routes.

Acceptance criteria

- Privacy/Terms are not falsely marked as legally approved.
- 404 returns proper status, error state is safe and useful.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 144

STAGE PROMPT 12 — SEO, Metadata, Structured Data, Sitemap and Robots

Implement all core SEO requirements.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Use Next.js Metadata API with global metadataBase and unique metadata per page; add canonical, Open Graph and social metadata.
- Ensure exactly one H1 on each HTML page; validate heading order and image alt text.
- Generate JSON-LD from verified source content: Organization/NGO, WebSite, WebPage, BreadcrumbList and BlogPosting where appropriate. Use stable @id values tied to the chosen canonical origin.
- Implement `app/sitemap.ts` so `/sitemap.xml` lists published canonical pages only. Implement `app/robots.ts` so `/robots.txt` allows intended public crawling and references the correct sitemap.
- Do not include unverified email/address/social URLs, ratings or impact data in schema.

Implementation notes

- Check current Next.js docs and schema validation tools.
- Ensure assets needed for rendering are not blocked.
- Do not expect structured data to guarantee rankings or FAQ rich results.

Acceptance criteria

- All routes have unique metadata and canonicals.
- Sitemap XML and robots.txt are valid in production.
- Schema matches visible content and validates.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 145

STAGE PROMPT 13 — Apply the Approved Animation Map

Distribute GSAP interactions carefully after pages exist.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Implement only effects listed in `docs/ANIMATION_MAP.md`: entry sequences, section reveals, selected parallax, limited pinned sequence, horizontal scroll container and scroll-linked scrub.
- Home may use one deliberate horizontal/pinned sequence on desktop; programme/article pages use subtler effects; FAQ/contact/legal remain calm.
- All content stays visible without JS and with reduced motion.
- Horizontal content must remain accessible by touch, keyboard and natural-flow fallback.
- Do not use animation to delay CTA or conceal sections.

Implementation notes

- Use ScrollTrigger cleanup and refresh; test route transitions, resizing and image/font load.
- Profile mobile performance and remove any effect that causes significant stutter.

Acceptance criteria

- Every effect has a working mobile/reduced-motion fallback.
- No broken pin spacing, layout shift or duplicate trigger.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 146

STAGE PROMPT 14 — Accessibility, Performance and Full QA

Perform a quality pass across every route.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Run lint, typecheck, production build, tests, broken-link/image/content checks, accessibility check and SEO route audit.
- Test widths 320/360/390/430/768/1024/1280/1440, latest relevant browsers, keyboard navigation, 200% zoom and reduced-motion preference.
- Aim for good Core Web Vitals: LCP <=2.5s, INP <=200ms, CLS <=0.1 at the 75th percentile, recognising actual field results vary.
- Verify alt text, exact H1 count, metadata, form error states, menu/floating controls and every final CTA.
- Check real-image source/permission register and remove test fixtures, fake testimonials, placeholder copy and unapproved stock visuals.

Implementation notes

- Use production build/profile tools rather than assuming dev mode represents performance.
- Categorise unresolved issues as blocking, high, medium or low and fix all launch blockers.

Acceptance criteria

- No critical route/CTA defect.
- No public placeholders, broken assets or accessibility blockers.
- QA report records commands, outcomes and screenshots.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 147

STAGE PROMPT 15 — Launch, Redirects and Handover

Prepare production with owner sign-off.

Purpose: Copy-and-paste implementation prompt for one Antigravity stage. Run only after the prior stage passes its acceptance criteria.

Requirements

- Confirm canonical domain host, HTTPS, redirects, final environment variables, provider setup, contact details, legal approval and content publication status.
- Verify `/sitemap.xml`, `/robots.txt`, structured data and all CTA/form workflows against production.
- Map old website URLs to relevant new routes and test redirects; do not redirect all old routes to Home.
- Create handover documentation: local setup, deployment, images, adding a blog/programme, environment variables, DNS/host notes, maintenance and deferred features.
- Keep secrets out of docs and source control.

Implementation notes

- Check staging noindex rules are not present in production.
- Submit sitemap to Search Console when the owner has verified the domain.
- Keep rollback deployment available.

Acceptance criteria

- Owner reviews public pages and signs off.
- Every critical flow works.
- Handover/maintenance files exist and no unresolved blocker is concealed.

Agent instruction

Return a concise completion report listing changed files, commands and actual results, manual checks, known issues, assumptions, and the recommended next stage. Do not claim a test passed unless it was actually run.

SPECIFICATION MODULE 148

Acceptance Checklist: Page and CTA Matrix

Purpose: Provide a final route-by-route quality checklist.

Requirements

- Every user-facing page has a clear purpose, unique metadata and one H1.
- Every standard page has hero image/overlay/title/subtitle/description and a working final CTA; Privacy/Terms are exceptions.
- All programme/blog/story listing cards have complete data, images/alt text and valid destinations.
- All form, phone, social and donation actions have real verified outcomes.

Implementation notes

- Use this as the last manual pass before launch; mark each route PASS/FAIL/WAIVED with reviewer/date.

Acceptance criteria

- No route is marked PASS while a key control remains a placeholder.

Route/template	Hero	H1/meta/schema	Final CTA	Responsive/QA
Home	Yes	Required	Required	Test all breakpoints
About	Yes	Required	Required	Test all breakpoints
Programmes index/detail	Yes	Required	Required	Test content/card states
Get involved/Volunteer/Donate/Partner	Yes	Required	Required	Test forms/decision gates
Impact/Stories/Gallery	Yes	Required	Required	Test images/consent
Blog index/detail	Yes	Required; BlogPosting where valid	Required	Test article/OG
FAQ/Contact/Search	Yes except search may use a compact heading layout if defined	Required for HTML pages	Required	Test accordion/forms/results
Privacy/Terms	No photo hero	One H1 + metadata	Relevant footer/contact path	Legal approval
sitemap.xml/robots.txt	N/A	Valid XML/text rules	N/A	Production verify

SPECIFICATION MODULE 149

Risk Register and Mitigations

Purpose: Track what can delay or damage the build.

Requirements

- Unverified programme status can mislead visitors; mitigate with content sign-off and status labels.
- Unapproved photos of children/vulnerable participants can cause privacy/safeguarding harm; mitigate with permission register.
- Missing form/payment provider could create nonfunctional CTAs; mitigate with decision gates and honest fallback.
- Over-animation can harm accessibility/performance; mitigate with reduced-motion fallback and QA.
- Unknown font licence can prohibit embedding; mitigate by checking terms and having fallback font.
- Unapproved social/contact details can create trust/security risk; mitigate by shipping only confirmed values.

Implementation notes

- Prioritise blockers before design polish.
- Record owner, severity, likelihood, mitigation and status in project tracker.

Acceptance criteria

- All high risks have an action and an owner.

SPECIFICATION MODULE 150

Glossary and Naming Convention

Purpose: Ensure the team uses terms consistently.

Requirements

- TDD: Technical Design Document; App Router: Next.js file-system routing model; CTA: Call to Action; JSON-LD: linked-data serialization used to express structured data; canonical: preferred URL among duplicates; LCP/INP/CLS: Core Web Vitals metrics.
- Use “programme” consistently in visible site copy unless ABWA directs otherwise.
- Use “work camp” where that is the source/client term; confirm public nomenclature and avoid implying a commercial tour.
- Use active/historical/planned/draft as distinct content states.

Implementation notes

- Create a small shared glossary for content and developer teams.
- Avoid using “impact” when the content only describes activities.

Acceptance criteria

- Terminology stays consistent in UI, code, TDD and content.

SPECIFICATION MODULE 151

Technical References and External Documentation

Purpose: List the authoritative references to use during implementation.

Requirements

- Next.js Metadata and Open Graph docs: https://nextjs.org/docs/app/getting-started/metadata-and-og-images
- Next.js sitemap convention: https://nextjs.org/docs/app/api-reference/file-conventions/metadata/sitemap
- Next.js robots convention: https://nextjs.org/docs/app/api-reference/file-conventions/metadata/robots
- Next.js Image component: https://nextjs.org/docs/app/api-reference/components/image
- GSAP React integration: https://gsap.com/resources/React/
- GSAP ScrollTrigger: https://gsap.com/docs/v3/Plugins/ScrollTrigger/
- Schema.org NGO: https://schema.org/NGO
- Google organization structured data: https://developers.google.com/search/docs/appearance/structured-data/organization
- Google Article structured data: https://developers.google.com/search/docs/appearance/structured-data/article
- Google structured-data policies: https://developers.google.com/search/docs/appearance/structured-data/sd-policies
- WCAG 2.2: https://www.w3.org/TR/WCAG22/
- Google FAQ rich-result changes: https://developers.google.com/search/blog/2023/08/howto-faq-changes

Implementation notes

- Check current docs when implementing because framework/plugin APIs and search presentation can change.
- Use official docs as the primary reference; do not copy examples blindly without adapting origin and content truth.

Acceptance criteria

- The implemented version aligns with the current documented APIs at time of build.

SPECIFICATION MODULE 152

Final Go/No-Go Decision Gate

Purpose: Make the launch decision explicit.

Requirements

- GO requires approved identity/contact information, current programme status, image rights, complete text, legal review, working CTAs/forms, SEO files and tested responsive layouts.
- NO-GO if payment instructions are invented, legal content is unreviewed but presented as approved, a major form falsely reports success, any key route is blank, or sensitive photo permissions are unresolved.
- Deferred feature list must be visible to the project owner.

Implementation notes

- Use an owner sign-off sheet with name, date, checked items and remaining limitations.
- Keep all unresolved items as follow-up tasks rather than hiding them inside the deployment report.

Acceptance criteria

- Project status is explicitly declared READY or NOT READY based on evidence.
